## ACKNOWLEDGMENTS

This report was prepared by Carol Fendler under the general direction of Arno I. Winard, Staff Assistant for Poverty Statistics, and Gordon W. Green, Jr., Chief of the Income and Poverty Statistics Branch. Assistance in preparation and review of the tables was provided by Pauline Kourstenis, Kathryn K. Grossman, and Vivian M. Simmons. The historical tables were programmed by Donna S. Coleman. Income editing and allocation procedures were developed by John F. Coder. Editorial assistance was provided by Rosa B. Taylor. Overall direction was provided by Roger A. Herriot, Assistant Division Chief, Population Division. Thelma N. Varhach of the Demographic Surveys Division was responsible for production of the detailed tables. Sampling review was performed by Robert O'Brien of the Statistical Methods Division. The report was edited by Paula Coupe and the cover was illustrated by Beverly Jo Jaquish, both of the Publications Services Division.

## **Characteristics of the Population Below the Poverty Level: 1978**

### **NOTE**

As part of the March 1979 Current Population Survey, the Bureau of the Census conducted an experiment in an effort to improve the reporting of income. For the purpose of the experiment, the full CPS sample was divided into two samples—each representative of the U.S. population. An experimental questionnaire was used for one sample consisting of three-eighths of the full sample, and the traditional questionnaire was used for the remaining five-eighths of the full sample. In this text, the poverty estimates cited for 1978 are based on the full sample. In addition, the full sample for 1978 was also used to measure changes from 1977. A discussion of the experiment and its impact on 1978 poverty data is provided in a later section entitled, "The March 1979 CPS Income Experiment."

This report presents detailed social and economic statistics for the population of the United States below the poverty level in 1978 based on the March 1979 Current Population Survey (CPS). As in previous poverty reports, data are presented by selected characteristics such as race, family relationship, type of residence, education, work experience, and type and source of income. For the first time, data on the poverty status of families and unrelated individuals before receipt of selected cash transfer payments have been included (table 41). It should be noted that the term "householder" has been used in the text of this report in place of the term "head," which still appears in the detailed tables. See the section, "Head vs. Householder" for further details.

The poverty threshold for a nonfarm family of four persons was \$6,662 in 1978, about 7.6 percent higher than the comparable 1977 figure of \$6,191. The poverty thresholds are updated every year to reflect changes in the annual average Consumer Price Index (CPI). (See page 205 for a detailed explanation of the poverty concept.) In this text, the terms "poverty," "low-income," and "poor" are used interchangeably. Also, the terms "families with male householder" and "families with female householder, no husband present" are synonymous with the terms "families maintained by men" and "families maintained by women."

### **HIGHLIGHTS**

As indicated in the advance report on income and poverty (Current Population Reports, Series P-60, No. 120), there were 24.5 million persons below the poverty level in 1978, 11.4 percent of the total population. Neither of these figures differed significantly from the previous year's estimates. In contrast, median family income increased by about 2 percent between 1977 and 1978 after adjustment for

inflation. Over the past 9 years there have been fluctuations in the size of the poverty population, with no long-term trend in either direction; the number of poor in 1978 was essentially the same as in 1969.

Although the poverty rate (i.e., the percent below the poverty level) for all persons was about 11.4 percent in 1978, many groups had poverty rates well above or below the average. For example, persons in families maintained by women with no husband present had a poverty rate of 36 percent, and female unrelated individuals had a rate of 26 percent. Male unrelated individuals were also above the average (17 percent), but persons in families maintained by men had a poverty rate of only 6 percent. Among Blacks, the overall poverty rate was 31 percent, but persons in families maintained by Black men were only slightly above the national average at 13 percent. As might be expected, persons working year round full time had very low poverty rates, regardless of race (2 percent for Whites and 4 percent for Blacks). The poverty rate for the aged (persons 65 years and over) was somewhat higher than the overall U.S. poverty rate.

Consistent with the overall lack of change between 1977 and 1978, few of the major subgroups within the population experienced significant changes in the number of poor or the poverty rate during this period. However, there have been changes in poverty among some segments of the population during the 1970's. Table A compares poverty data for the years 1969, 1977, and 1978, by race, age, type of residence, and type of family.

- There were 16.3 million Whites, 7.6 million Blacks, and 2.6 million persons of Spanish origin below the poverty level in 1978, essentially the same as in the previous year. The apparent decrease between 1969 and 1978 in the number of poor White persons was not statistically

NA Not available.

<sup>1</sup>Persons of Spanish origin may be of any race.

significant, but there was some evidence that the number of poor Blacks increased from 7.1 to 7.6 million during this period. In 1978, as in earlier years, the poverty rate for Whites (9 percent) was considerably lower than the rates for Blacks and persons of Spanish origin (31 and 22 percent, respectively).

- There were about 3.2 million persons 65 years old and over below the poverty level in both 1977 and 1978, down from 4.8 million in 1969. The decline in the number of elderly poor occurred primarily during the early 1970's, due in large part to the increases in Social Security benefit levels (table 1). One reason that the number of poor persons

65 years and over has not changed in the last few years is that Social Security benefits and the poverty thresholds are both tied to the Consumer Price Index.

- There were 9.7 million children under 18 years in families below the poverty level in 1978, constituting about 40 percent of the poverty population. There were about as many poor children in 1978 as in 1969, despite a decline in the overall number of related children under 18 during that period from 68.7 million to 62.0 million.
- There was an increase in the proportion of all poor persons living in metropolitan areas from 54 percent in 1969 to 62 percent in 1978. Of the metropolitan poor in 1978, 62

percent lived in central cities and the remainder lived in suburban areas. These proportions were essentially the same in 1969.

- There were 10.3 million poor persons living in the South in 1978. The South contained about 42 percent of the Nation's poor, but only 32 percent of the total U.S. population. Between 1969 and 1978, however, the number of poor persons in the South declined by about 800,000, while the number of poor in the rest of the country rose from 13.1 to 14.2 million.
- There were about 5.3 million poor families in 1978, the same as in 1977. About one-half were families with a female householder, no husband present. The poverty rate for this group (31.4 percent) was much higher than the rates for husband-wife families (5.2 percent) and families with a male householder, no wife present (9.2 percent). Between 1969 and 1978, the number of poor families maintained by women rose from 1.8 to 2.7 million, an increase brought about primarily by the increase in female-householder families in the total population. During the same period, however, the number of poor families maintained by men dropped from 3.2 to 2.6 million.

- In sharp contrast to the lack of change among other population subgroups, the number of Black husband-wife families below the poverty level declined from 430,000 to 370,000 between 1977 and 1978. There were 410,000 poor Black families maintained by men (almost 90 percent of which were husband-wife families) in 1978, down from 630,000 in 1969. However, this decline in poor families with a male householder was more than offset by the increase in the number of poor Black families with a female householder, no husband present, from 740,000 in 1969 to 1.2 million in 1978.
- The poverty rate in 1978 for White families (7 percent) was much lower than the rates for Black families (27 percent) and families of Spanish origin (20 percent). However, the difference in poverty rates by race and Spanish origin narrows when comparisons are made for husband-wife families. The poverty rates for Black and Spanish-origin families of this type (11 and 12 percent, respectively) were higher than the rate for comparable White families (5 percent), but were not significantly different from each other.
- There were 5.4 million unrelated individuals (persons 14 years old and over living alone or with nonrelatives) below

Figure 1.

the poverty level in 1978: 1.8 million men and 3.6 million women. The number of poor unrelated individuals increased between 1969 and 1978, but their poverty rate declined substantially from 34 to 22 percent. This indicates that the increase in the total number of unrelated individuals during this period was much greater than the increase in the number who were poor. Unrelated individuals accounted for 22 percent of all poor persons in 1978, compared with 21 percent in 1969.

- In 1978, about 4.2 million unrelated individuals below the poverty level were White and 1.1 million were Black. The poverty rate in 1978 for Black unrelated individuals (39 percent) was almost double that of their White counterparts (20 percent). Both Black and White unrelated individuals experienced declines in their poverty rate between 1969 and 1978, although the improvement was greater for Whites.

#### CHANGES IN DEMOGRAPHIC CHARACTERISTICS OF POOR FAMILIES

Many of the changes occurring during the 1970's in the characteristics of families below the poverty level were similar to those occurring among all families. For example, families

below the poverty level, like families in general, were smaller in 1978 than they were in 1969, had younger householders, and were more likely to be maintained by women with no husband present. However, in spite of these similar trends, there were significant differences between the characteristics of families in the poverty population and those in the total population.

Although their average size fell during the 1970's, poor families in 1978 were still larger than all families (table B). The mean size of poor families was 3.6 persons, compared with 3.3 persons for all families. The comparable figures for 1969 were 3.8 and 3.5 persons, respectively. In 1978, poor families maintained by men were larger than those maintained by women; this holds true for the total population as well as for the poor (figure 1).

Regardless of the sex of the householder, families below the poverty level have become more likely to include children under 18 years old; in 1978, 77 percent included at least one child, compared with 64 percent in 1969. In contrast, the proportion of all families with related children under 18 declined slightly during this period (figure 2). Among poor families with related children, the mean number of children per family declined during the 1970's from 2.95

in 1969 to 2.39 in 1978. This decrease is consistent with the declining birth rates of the last two decades.

The period of high birth rates in the 1950's is probably one factor in the decline in the median age of poor family householders during the 1970's, as the children born during the "baby boom" became young adults. For householders of poor families, the drop in median age was from 47.1 years in 1969 to 39.1 years in 1978. Another reason for the decrease in the median age of poor householders was the decline in the number of elderly poor during the 1970's. As part of this general decline, the number of family householders 65 years old and over in poverty fell from 1.3 million to 710,000 between 1969 and 1978.

Families maintained by women with no husband present constitute a growing proportion of the poverty population. In 1978, about one-half of all poor families had a female householder, compared with 36 percent in 1969. This change primarily reflected the increase in female-householder families in the total population during this period from 11 percent to 15 percent. One interesting difference between poor female householders and female householders in general is in their marital status. About one-fourth of female householders below the poverty level in 1978 were single (never married), compared with 17 percent of all female householders (table C). One reason for this difference is that

the poverty population includes a greater proportion of women under 25 years old maintaining families; these younger householders are much more likely to be single than their older counterparts.

Women who were married, but whose husbands were absent, constituted the largest proportion of poor female family householders in 1978 (about one-third). In contrast, the largest segment of all female householders consisted of divorcees (also about one-third). In general, female householders below the poverty level were more likely to be single or married with an absent husband (most such women were separated) than all women maintaining families, and less likely to be either divorced or widowed.

## CENTRAL CITY AND POVERTY AREA RESIDENCE

One of the major trends in the poverty population during the 1970's was the increasing proportion of the poor in central cities. Between 1969 and 1978, the proportion of all poor persons living in central cities rose from 34 percent to 38 percent. There was some evidence that there was a similar increase during this period in the proportion of the poverty population living in suburban areas (from 22 to 24 percent), while nonmetropolitan areas experienced a substantial decline, from 44 percent to 38 percent (see table D).

<sup>1</sup>Based on the 1-in-100 sample of the 1970 census.

The reader may note that the change in the number of poor shown in table D does not support the statement made earlier in the text that the total number of persons below the poverty level was essentially the same in 1978 as in 1969. The discrepancy arises because the 1969 data in this section were obtained from the 1-in-100 sample of the 1970 census rather than from the March 1970 CPS.<sup>1</sup> Although the 1970 census provides better residence data for the poverty population than the CPS, the change over time in the overall size of the poverty population is best measured by using data from the same source (i.e., the CPS) for each of the two years being compared.

Of the poor living in metropolitan areas, about three-fifths live in central cities, and the remainder live in suburban areas; for all persons, the figures are almost reversed. The proportion of the metropolitan poor living in central cities was about the same in 1978 as in 1969, while the comparable proportion for the total population declined. The concentration of the poor in central cities is about the same in large metropolitan areas as in smaller ones.

There have been important changes in the composition of the poverty population during the 1970's which are, to some degree, common to both metropolitan and nonmetropolitan areas. In 1978, each type of area—central cities, suburbs, and nonmetropolitan areas—generally had fewer poor families maintained by men and more poor families maintained by women than in 1969 (see table E). However, central cities had, by far, the highest proportion of poor families with female householders: 67 percent of all poor families in central cities were maintained by women in 1978, compared with 47 percent for suburban areas and only 36 percent for nonmetropolitan areas.

The predominance of female-householder families in central cities is one sign that future progress against poverty in these areas may be slow, since the incidence of poverty among families of this type has not declined as it has among male-householder families. In fact, the poverty rate for female-householder families residing in central cities was actually higher in 1978 (38 percent) than in 1969 (33 percent). In contrast, the poverty rate for comparable male-householder families dropped from 7 percent to 5 percent during the same period.

In 1969, poor Black families were about evenly divided between those maintained by men and those maintained by women, and between central city residents and those living elsewhere. In contrast, by 1978, 74 percent of all poor Black families were maintained by females and 60 percent resided in central cities. Although there were increases during the 1970's in the proportion of poor White families maintained by women and in the proportion living in central cities, such families were still predominantly maintained by males (61 percent) and living in suburbs or nonmetropolitan areas (73 percent) in 1978.

<sup>1</sup> The data shown in this section of the text for the year 1969 were obtained from the 1-in-100 sample of the 1970 Census of Population, and therefore differ from 1969 data cited elsewhere in the text and tables of this report, which were obtained from the March 1970 CPS. The 1-in-100 sample has been used for this section because it provides much more detailed residence data for the poverty population than are available from the CPS.

**Poverty areas.** The poverty populations of central cities, suburbs, and nonmetropolitan areas differ from one another not only in size and composition, but also in the degree to which they are concentrated in certain areas. The concept of a "poverty area" was developed as a way of measuring the degree of geographic concentration of the poor. A poverty area is defined as a census tract (in metropolitan areas) or a minor civil division (in nonmetropolitan areas) in which 20 percent or more of the population was below the poverty level in 1969 based on the 1970 census.

In 1969, 51 percent of all poor persons lived in poverty areas. In nonmetropolitan areas, however, the proportion was much higher: 61 percent, compared with 54 percent in central cities and only 23 percent in suburban areas (see table F). By 1978, the proportion of the poor living in poverty areas was lower both overall (39 percent) and for the various types of residence. On the basis of currently available data, it is not possible to determine whether these declines occurred because the poor have actually become more dispersed, or because the poverty areas based on 1970 census data are now out of date. The 1980 census will provide additional information on these questions.

These are some of the highlights obtained from the Consumer Income Supplement conducted in March 1979 in connection with the Bureau's monthly Current Population Survey (CPS). The information was collected from a sample of persons representing: (1) the civilian noninstitutional population, and (2) members of the Armed Forces living off post or with their families on post in the United States. Unrelated individuals under 14 years of age are excluded from this report.

The poverty definition used in this report is based on an index developed at the Social Security Administration (SSA) in 1964, and revised by a Federal Interagency Committee in 1969. A directive from the Bureau of the Budget established the Census Bureau's statistics on poverty as the standard data series to be used by all Federal agencies.<sup>2</sup>

The poverty concept is a statistical yardstick based on the Department of Agriculture's 1961 Economy food plan and reflects the different consumption requirements of families in relation to their size and composition, sex and age of the family head, and farm-nonfarm residence. A food-to-income ratio of one-third for families of three or more, based on the Department of Agriculture's 1955 Survey of Food Consumption, was used to derive the poverty thresholds from the economy food plan. For further details, see appendix A.

When analyzing CPS data on the poverty population, it is important to keep in mind that these data are based on a sample survey (56,000 households) and are therefore subject to sampling variability. An explanation of sampling variability is found in appendix B, and tables 10, 16, and 40 include standard errors.

Data on income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare

<sup>1</sup>Based on the 1-in-100 sample of the 1970 census.

premiums, etc. Money income is the sum of the amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and workmen's compensation; government and private employee pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food stamps, health benefits, and subsidized housing; that many farm families received nonmoney income in the form of rent-free housing and goods produced and consumed on the farm; or that nonmoney income is also received by some nonfarm residents in the form of access to business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc.

These elements should be considered when comparing income levels. In addition, it should be noted that nonmoney income is not considered in calculating the poverty thresholds. In recent years, however, receipts from nonmoney transfers such as food stamps have become an increasingly important element in the income of poor persons.<sup>3</sup> Data from the 1976 Survey of Income and Education (SIE) indicate that about 40 percent of all poor families and unrelated individuals participated in the food stamp program.

The Bureau of the Census and the Department of Health, Education, and Welfare are currently involved in a research program designed to improve and expand the collection of income data. This new survey will become operational beginning in 1981 for a small national sample. In addition to the questions on various types of money income, this developmental program will also collect information on sources of nonmoney income, participation in major governmental programs, amount of taxes paid, and assets and liabilities.

Readers should be aware that for many different reasons, there is a tendency in household surveys for respondents to underreport their income. Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as Social Security, public assistance, unemployment compensation and net income from interest, dividends, rentals, etc. Overall, income earned from wages or salary is more accurately reported than other sources of income. After editing and allocation of missing amounts, wages and salaries in the survey accounted for approximately 97 percent of independently derived administrative sources. By contrast, 1978 income data on Social Security and public assistance payments to beneficiaries amounted to approximately 94 and 76 percent, respectively, of independently derived estimates. Comparable estimates are not available for the poverty population. For further details, see the appendix A section, "Comparability of Current Population Survey Income Data with Other Data."

A study which attempts to adjust the CPS data for underreporting and to impute government "in-kind" transfer program benefits, such as food stamps, Medicare, and

subsidized housing to families in the survey, has been prepared by the Congressional Budget Office (CBO).<sup>4</sup> Statistical techniques were used to simulate eligibility and participation of persons in the various programs. For simulated participants, the services received were given a money "value" based on the assumption that the value of these services to the beneficiaries is equal, on the average, to the government's cost.

The CBO report represents one attempt to measure and study the effects of adjusting for underreporting of money income and the inclusion of nonmoney transfer payments on the size distribution of income and poverty counts. Although the procedures used by the CBO provide one approach, there continues to be a general lack of agreement on how to measure and value in-kind income. The interested reader may wish to consult a report by a governmental interagency task force which discusses many of these issues.<sup>5</sup>

The poverty counts presented in the CBO report are not entirely comparable to those presented in the P-60 reports because the institutionalized population, members of the Armed Forces living in group quarters, and the population of Puerto Rico are included in the CBO report but are excluded from the estimates presented here. In addition, the CBO estimates, although based on data from the March 1976 CPS, are for fiscal year 1976 rather than calendar year 1975. The poverty threshold levels used in the CBO report were also adjusted to cover the fiscal year reference period, and therefore do not match those published in Current Population Reports, Series P-60, No. 106.

It also should be noted that the poverty threshold levels used in this Census report correspond to a measure of income adequacy which was originally developed as a relative measure based on money income.<sup>6</sup> Whether this measure also would serve as a measure of income adequacy for an income distribution which includes nonmoney as well as money income as in the CBO report, is an issue which deserves attention.<sup>7</sup>

## THE MARCH 1979 CPS INCOME EXPERIMENT

As part of a continuing effort to improve the quality of its income statistics, the Census Bureau tested a modified income supplement questionnaire in the March 1979 CPS. The new questionnaire was administered to a representative sample consisting of three-eighths of the full sample households. Another representative sample consisting of the remaining five-eighths of the full sample were interviewed using the traditional questionnaire.

The experimental questionnaire contained a number of modifications designed to improve income reporting. First,

<sup>1</sup>Persons of Spanish origin may be of any race.

probes were added to identify circumstances which could result in the receipt of specific income types. For example, a question concerning injuries or work-related illnesses was added to identify persons likely to have received worker's compensation payments. Second, more detailed sources of income were enumerated. Third, the questionnaire was designed to facilitate the recording of income received jointly between husbands and wives, such as interest from savings accounts. Fourth, because of the additional probing, most questions concerning "unearned" income sources were asked using household screener questions in order to reduce respondent burden.

It should be noted here that even though the new questionnaire obtained more detailed income data, these data were collapsed to make them consistent with those obtained from the traditional questionnaire for processing purposes. Following is a discussion of the survey results obtained from

using the two different questionnaires (facsimiles of both appear in appendix D).

Overall, the experimental questionnaire yielded results very similar to the traditional supplement for key summary statistics such as median family income and the number of persons below the poverty level. Under the new approach, median income for all families was \$17,670, very similar to the \$17,620 yielded by the conventional approach. The two questionnaires also produced similar medians for most subgroups of families.

A comparison of income data for persons shows that while the median income of men was not significantly affected, the median income of women was lowered dramatically by the new approach, from \$4,250 to \$3,820. The difference was due primarily to the large increase, under the new approach with its more detailed probes, in the number of women reporting recipiency of small amounts of

income (primarily interest from joint savings accounts). If the traditional questionnaire had been used, many of these women would likely have reported that they received no income and therefore would not have been included in the calculation of median income. Since these women did report at least some small amount of income under the new approach, this tended to lower the overall median income for women. The new questionnaire did not appreciably change the median income of women with earnings since all of these women were already included in the calculation of the median. Detailed comparisons of median incomes for persons and families under the old and new approaches appear in the final report on 1978 money income, Current Population Reports, Series P-60, No. 123.

Although the new questionnaire had some impact on the income data, it had no significant effect on the poverty data. The three-eighths sample produced an estimate of 24.4 million poor persons, essentially the same as the 24.6 million yielded by the five-eighths sample. Table G compares the traditional and experimental poverty data for selected population subgroups; none of these estimates differ significantly.

The new approach brought about some improvements in reporting for certain types of income, particularly property income and some government transfer payments. There was an increase in recipiency for interest, dividends, rent, veterans' payments, unemployment compensation, and worker's compensation. A detailed discussion of the improvements is presented in the money income report.

The 1978 estimates based on the full sample give the best estimate of income and poverty in 1978 as well as the best measure of change from 1977. Although the 1978 estimates based on the five-eighths sample were collected using the same questionnaire as used for the 1977 estimates, the smaller sample size results in a greater degree of sampling variability and a less accurate measure of change for most categories. Comparisons involving poverty data should be made using the estimates obtained from the full sample. All of the 1978 poverty data cited in the text and shown in the detailed tables are based on the full sample.

## HEAD VERSUS HOUSEHOLDER

In the 1980 census the Census Bureau plans to discontinue the use of the terms "head of family" and "head of household." Recent social changes have resulted in a trend toward more nearly equal status for adult members of a household and, therefore, have made the term "head" increasingly inappropriate in the analysis of household and family data. Specifically, the Bureau is planning to change its longtime practice of always classifying the husband as head when he and his wife are living together.

In the 1980 census, a "householder" will be designated as the household reference person. The householder is to be the first adult household member listed on the census questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple either the husband or the wife may be listed first and thereby becomes

the reference person, or householder, to whom the relationship of other household members is to be recorded. However, in order to provide some comparability with earlier years, the husband will be shown as the householder in a selected number of tables.

Beginning with the October 1978 CPS, the Bureau started to collect information based on the householder concept. The publication of poverty data incorporating the new concept will begin with the report based on the March 1980 CPS, after the necessary programming changes to the detailed tables have been made. The user of this report is cautioned that the term "householder" as used in the text refers to the "head," as defined in earlier reports; the term "head" is retained in the detailed tables.

## RELATED MATERIALS

### Current Population Survey

**Current Population Survey Reports.** A detailed explanation of the poverty concept appears in Current Population Reports, Series P-23, No. 28, *Revision in Poverty Statistics, 1959 to 1968* and in *The Measure of Poverty, A Report to Congress as Mandated by the Education Amendments of 1974*, prepared by a Poverty Studies Task Force under the auspices of the Department of Health, Education, and Welfare. This report also discusses limitations of the current poverty definition and presents alternative methods for measuring poverty.

A detailed description of the original poverty index developed by the Social Security Administration appears in the following articles by Mollie Orshansky published in the *Social Security Bulletin*: "Counting the Poor: Another Look at the Poverty Profile," January 1965, and in "Who's Who Among the Poor: A Demographic View of Poverty," July 1965.

Data on poverty based on the original poverty definition appear in Current Population Reports, Series P-60, No. 54, *The Extent of Poverty in the United States: 1959 to 1966*. Comprehensive data and analysis of poor persons and families based on the revised definition of poverty appear in later reports in the P-60 series. Poverty data are also included in some reports in the P-20 and P-23 series of the Current Population Reports. All relevant titles are listed on the inside of the back cover of this report. Data based on the Current Population Survey showing the distribution of families and persons, by income levels also appear in the P-60 series; the latest report is P-60, No. 123, *Money Income in 1978 of Families and Persons in the United States*.

Advance data on the poverty population in 1978 cross-classified by selected characteristics appear in Current Population Reports, Series P-60, No. 120, *Money Income and Poverty Status of Families and Persons in the United States: 1978*.

A summary of the changes in the composition of the low-income population since 1959 and the limitations of the data used to quantify poverty are presented in "Trends and Composition of the Low-Income Population," by Renée Miller and Arno Winard, *Proceedings of the Social Statistics Section, American Statistical Association*, 1974.

An analysis of the characteristics of food stamp households appears in Current Population Reports, Series P-23, No. 61, *Characteristics of Households Purchasing Food Stamps*.

Possible modifications to the current poverty definition are discussed in a paper entitled "Improving the Poverty Definition," by Carol Fendler and Mollie Orshansky, *Proceedings of the Social Statistics Section*, American Statistical Association, 1979. The paper discusses the rationale for and results of two types of changes: (1) simplifying the poverty matrix by eliminating certain variables, and (2) updating the thresholds to take into account current nutritional knowledge and more recent data on U.S. consumption patterns. Some of the changes explored in the paper, particularly the elimination of differentials based on farm-nonfarm residence and sex of the family head, are under consideration by the Office of Federal Statistical Policy and Standards, and may be implemented in the 1980 census and the March 1980 CPS.

**Office of Economic Opportunity Tabulations.** The contents of the tabulations originally sponsored by the Office of Economic Opportunity (OEO) and now supported by the Office of the Assistant Secretary for Planning and Evaluation, Department of Health, Education, and Welfare, are outlined in appendix C. These tabulations contain more detailed cross-classifications by age than are shown in the tables presented in this report.

### **Survey of Income and Education**

The Survey of Income and Education (SIE) was a one-time survey of approximately 151,000 interviewed households nationwide, conducted in each State by the Bureau of the Census between April and July 1976. The purpose of the SIE was to provide estimates of the number of children 5 to 17 years old in poverty families in each State and the District of Columbia, as required by the Education Amendments of 1974.

In addition to collecting income data needed to determine poverty status, the opportunity presented by such a large survey was also used to gather some additional income-related information not usually collected in the Census Bureau's current income surveys. Such data include the receipt of food stamps, housing costs for homeowners and renters, and estimated cash assets. Also, information relevant to a number of Department of Health, Education, and Welfare (HEW) programs was collected, including data on English language proficiency, school enrollment, food stamps and public assistance recipiency, housing tenure, liquid asset holdings, child and adult disability, and health insurance coverage.

Income and poverty data from the SIE have been published in a series of four reports (one for each of the four major regions in the Nation): Current Population Reports, Series P-60, No. 110 (Northeast); No. 111 (North-Central); No. 112 (South); and No. 113 (West). Each report presents data for the divisions and States within the region and for the total United States. Contained in the reports are income

distributions and poverty data for families, persons, and unrelated individuals, cross-classified by a broad range of socioeconomic and demographic characteristics similar in content to data published from the Current Population Survey. The income tables include such characteristics as residence, housing tenure, age, race, size and type of family, number of children under 18 years old, number or earners, and occupation; work experience, and education of head. In addition to many of the above characteristics, the poverty tables also include information on reasons for not working, type of income, subsidized housing of renters and living arrangements for unrelated individuals.

An additional report, Current Population Reports, Series P-20, No. 334, "Demographic, Social, and Economic Profile of States: Spring 1976," presents summary data from the SIE on a wide variety of characteristics (including poverty status) for the 50 States and the District of Columbia, divisions, regions, and the entire United States. Several of the tables include comparable data from the 1970 census.

Data on income and poverty for calendar year 1975 from the SIE differ somewhat from those based on the CPS. In general, the estimates of median income from the SIE are slightly higher than comparable estimates from the CPS. For example, the median family income from the SIE was \$14,094 compared to \$13,719 from the CPS. Estimates of the number of persons below the poverty level by various characteristics from the SIE are generally lower than from the CPS. For example, there were 23,991,000 persons below the poverty level in 1975 from the SIE compared to 25,877,000 from the CPS.

Although two major aspects of these surveys were the same — the money income concept and the questionnaire wording and design — there were some significant procedural differences which probably cause the income estimates in these surveys to differ. For a detailed discussion of these differences, see the published SIE reports.

### **Decennial Census**

Poverty data collected in the 1970 Census of Population appear in a number of published reports. Selected characteristics of persons, families, and unrelated individuals below the poverty level, for the United States, each of the States, counties, standard metropolitan statistical areas, urbanized areas, and urban places are presented in 1970 Census of Population, Vol. 1, *Characteristics of the Population*, chapter C, "General Social and Economic Characteristics." Statistics on poverty status in 1969 of persons and families by detailed characteristics, including cross-classifications by race, age, weeks worked, education, type of family, etc., are presented in 1970 Census of Population, Vol. 1, *Characteristics of the Population*, chapter D, "Detailed Characteristics," for some or all of the following areas: United States, each of the States, and standard metropolitan statistical areas of 250,000 inhabitants or more. Further information is contained in Data Access Description No. 29, Collection, Evaluation, and Processing Series CEP-7, *Low-Income Data from the 1970 Census*.

Cross-classifications of poverty status in 1969 for persons and families by detailed social, economic, and housing characteristics are presented in 1970 Census of Population, Vol. II Report PC(2)-9A, *Low-Income Population*. Tables are generally for the United States, although some are repeated for regions and metropolitan-nonmetropolitan residence. Data on the social, economic, and housing characteristics of the low-income population residing in poverty areas in the 50 largest cities can be found in 1970 Census of Population, Vol. II Report PC(2)-9B, *Low-Income Areas in Large Cities*, Supplementary Report PC(S1)-56,

*Selected Characteristics of the Population in Low-Income Areas of Large Cities*, and Supplementary Reports PC(S1)-65 to PC(S1)-103, *Low-Income Neighborhoods in Large Cities: 1970*. Selected data on the poverty status in 1969 and 1959 of persons and families for the United States, each of the States, counties, standard metropolitan statistical areas (SMSA's), and central cities of large SMSA's appear in 1970 Census of Population, Supplementary Report PC(S1)-105, *Poverty Status in 1969 and 1959 of Persons and Families, for States, SMSA's, Central Cities, and Counties: 1970 and 1960*.

---

#### NOTE

In the past the Census Bureau has designated a head of household to serve as the central reference person for the collection and tabulation of data for each member of the household (or family). However, the trend toward recognition of equal status and roles for adult family members makes the term "head" less relevant in the analysis of household and family data. As a result, the Bureau is currently developing new techniques for the enumeration and presentation of data which will eliminate the concept "head." Although the data in this report are based on this concept, methodology for future Census Bureau reports will reflect a gradual movement away from this traditional practice.

---

**Table 1. Persons Below the Poverty Level, by Family Status, Sex of Head, Race, and Spanish Origin:**  
**1959 to 1978**

(NUMBERS IN THOUSANDS. PERSONS AS OF MARCH OF THE FOLLOWING YEAR. ALL TABLES EXCLUDE UNRELATED INDIVIDUALS UNDER 14 YEARS OLD, INMATES OF INSTITUTIONS, AND MEMBERS OF ARMED FORCES, EXCEPT THOSE LIVING OFF POST AND THOSE LIVING WITH FAMILIES ON POST. FOR MEANING OF SYMBOLS, SEE TEXT)

## **Appendix A. Definitions, Explanations, Limitations, and Comparability of Data**

**Population coverage.** This report includes the civilian non-institutional population of the United States and approximately 824,000 members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces. Unrelated individuals under 14 years old are also excluded from this report.

**Farm-nonfarm residence.** The farm population refers to rural residents living on farms. The definition of farm and nonfarm residence in the present survey and in the Current Population Surveys since March 1960 is the same as that used in the 1960 and 1970 censuses but differs from that used in earlier surveys and censuses. In the present survey, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?," and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under \$50, \$50 to \$249, \$250 to \$999, or \$1,000 or more)?" The household was classified as in the farm population if either (a) the acreage response was "Yes" and sales amounted to \$50 or more, or (b) the acreage response was "No" and sales amounted to \$250 or more. All other households were classified as in the nonfarm population, which is comprised of persons living in urban areas and persons not on farms living in rural areas. Persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming, are classified as nonfarm population.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm. However, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

For detailed information on the effect of the above definitional change, see Current Population Reports, Series P-60, No. 35, pages 10 and 11.

In August 1975, the U.S. Department of Agriculture and the Bureau of the Census announced a change in the official definition of a farm. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place from which

\$1,000 or more of agricultural products were sold, or would normally be sold, in the reporting year. However, for purposes of comparability, the figures presented in this report are based on the definition in use from 1960 to 1975.

**Metropolitan-nonmetropolitan residence.** The population residing in standard metropolitan statistical areas (SMSA's) as defined in the 1970 census constitutes the metropolitan population. Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, SMSA's consist of towns and cities, rather than counties.

This report contains data for the 20 largest SMSA's and the central cities of the five largest SMSA's, as defined in the 1970 census. The counties (or towns and cities) which comprised these SMSA's in the 1970 census can be found in 1970 Census of Population, Vol. 1, *Characteristics of the Population*, Part A, "Number of Inhabitants."

**Central cities.** Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. If only one central city is designated, then it must have 50,000 inhabitants or more. The area title may include, in addition to the largest city, up to two city names on the basis and in the order of the following criteria: (1) The additional city has at least 250,000 inhabitants or (2) the additional city has a population of one-third or more of that of the largest city and a minimum population of 25,000. An exception occurs where two cities have contiguous boundaries and constitute, for economic and social purposes, a single community of at least 50,000, the smaller of which must have a population of at least 15,000.

**Geographic regions.** The four major regions of the United States for which data are presented in this report represent groups of States, as follows:

**Northeast:** Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

**North Central:** Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin.

**South:** Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia.

**West:** Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.

**North and West:** Northeast, North Central, and West regions combined.

**Poverty areas.** For this report poverty areas are defined in terms of census tracts (in metropolitan areas) or minor civil divisions (townships, districts, etc. in nonmetropolitan areas) in which 20 percent or more of the population was below the poverty level in 1969.

For further details, see 1970 Census of Population Report PC(2)-9B, *Low-Income Areas in Large Cities*, and Supplementary Reports PC(S1)-65 to PC(S1)-103, *Low-Income Neighborhoods in Large Cities: 1970*.

**Federal regions.** The 10 standard Federal administrative regions, for which data are available in the OEO tabulations described in appendix C, represent groups of States, as follows:

**Region I, Boston:** Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont.

**Region II, New York:** New Jersey, New York.

**Region III, Philadelphia:** Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia.

**Region IV, Atlanta:** Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee.

**Region V, Chicago:** Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin.

**Region VI, Dallas-Fort Worth:** Arkansas, Louisiana, New Mexico, Oklahoma, Texas.

**Region VII, Kansas City:** Iowa, Kansas, Missouri, Nebraska.

**Region VIII, Denver:** Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming.

**Region IX, San Francisco:** Arizona, California, Hawaii, Nevada.

**Region X, Seattle:** Alaska, Idaho, Oregon, Washington.

**Tenure.** A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including

units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

**Mobility status.** The population of the United States 4 years old and over has been classified according to mobility status on the basis of a comparison between the place of residence of each individual at the time of the March 1979 CPS and the place of residence 4 years earlier. Nonmovers are all persons who were living in the same house at the beginning and end of the period. Movers are all persons who were living in a different house at the end of the period than at the beginning of the period. Movers from abroad include all persons, either citizens or aliens, whose place of residence was outside the United States at the beginning of the period, that is, in an outlying area under the jurisdiction of the United States or in a foreign country.

**Income.** For each person in the sample 14 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) Money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest (on savings or bonds); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payments or unemployment and workers' compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

When an indefinite amount was reported by the respondent, a specific value was assigned during processing wherever possible. If the indefinite amount was reported in terms of a range, the mid-point of the range was assigned (e.g., \$10,000 to \$15,000 was coded as \$12,500). Open-ended amounts were converted to designated specific amounts; e.g., over \$10,000 may be coded at \$15,000.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, labor force status, etc., and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food

stamps, health benefits, and subsidized housing; that many farm families receive nonmoney income in the form of rent-free housing and goods produced and consumed on the farm; or that nonmoney income is also received by some nonfarm residents in the form of access to business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

**Money wages or salary** is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

**Net income from nonfarm self-employment** is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include cost of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of salable merchandise consumed by the proprietors of retail stores is not included as part of net income.

**Net income from farm self-employment** is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government crop loans, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise, inventory changes were not taken into account.

**Social Security** includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. "Medicare" reimbursements are not included.

**Supplemental Security income** includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

**Public assistance or welfare payments** include public assistance payments such as aid to families with dependent children and general assistance. Separate payments received for hospital or other medical care (vendor payments) are excluded from this item.

**Dividends, interest (on savings or bonds), income from estates or trusts, net rental income or royalties** include dividends from stockholdings or membership in associations, interest on savings or bonds, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

**Unemployment compensation, veterans' payments, or workers' compensation** include: (1) Unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) workers' compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

**Private and government employee pensions** include: (1) Private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company; (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

**Annuities, alimony, regular contributions from persons not living in the household, and other periodic income** include the following types of income: (1) Periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

**Receipts not counted as income.** Receipts from the following sources were not included as income: (1) Money received

from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

**Total money earnings**—the algebraic sum of money wages or salary and net income from farm and nonfarm self-employment.

**Income other than earnings**—The algebraic sum of all sources of money income except wages and salaries and income from self-employment.

**Total money income.** The algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings represents total money income. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrelated individuals include in the lowest income group (under \$500) those who were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Many of these were living on income "in kind," savings, or gifts; or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole breadwinner had recently died or had left the household. However, many of the families and unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

**Median income.** The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median.

**Mean income.** The mean income is the amount obtained by dividing the total income of a group by the number of families or unrelated individuals (as appropriate) in that group.

**Income per family member.** The income per family member is the average amount of income available to every man, woman, and child in a family. Income per family member is derived by dividing the total family income of a group by the number of family members in the same group.

**Poverty (low-income) definition.** Poverty statistics presented in this report are based on a definition developed by the Social Security Administration in 1964 and revised by a Federal Interagency Committee in 1969.

Statistics presented in Census Bureau reports prior to publication of Current Population Reports, Series P-60, No. 68, "Poverty in the United States, 1959 to 1968," were based on the poverty index developed by the Social Security Administration (SSA) in 1964. This index provided a range

of income cutoffs adjusted by such factors as family size, sex of the family head, number of children under 18 years old, and farm-nonfarm residence. At the core of this definition of poverty was the economy food plan, the least costly of four food plans that are nutritionally sound, designed by the Department of Agriculture. It was determined from the Department of Agriculture's 1955 survey of food consumption that families of three or more persons spend approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households. Annual revisions of these SSA poverty cutoffs were based on price changes of the items in the economy food budget.

As a result of deliberations of a Federal Interagency Committee in 1969, the following two modifications to the original SSA definition of poverty were recommended: (1) that the SSA thresholds for nonfarm families be retained for the base year 1963, but that annual adjustments in the levels be based on changes in the Consumer Price Index (CPI) rather than on changes in the cost of food included in the economy food plan; and (2) that the farm thresholds be raised from 70 to 85 percent of the corresponding nonfarm levels. The combined impact of these two modifications resulted in an increase of 360,000 poor families and 1.6 million poor persons in 1967. The reasons for making these changes are outlined below.

**Change in cost of living adjustment.** Annual revisions of the SSA poverty thresholds were based only on the average per capita cost of the foods in the economy food budget. This method of updating these cutoffs did not fully reflect increases in the overall cost of living during the 1960's. The pace at which the general cost of living advanced in the 1960's was not uniformly matched by increases in the price of goods in the economy food plan. Thus, general price changes since 1959 were not paralleled by comparable changes in the poverty thresholds. The differences between changes in the cost of the economy food budget and the overall cost of living led to the adoption of the CPI as the basis for annual revisions in the income cutoffs.

Table A-1 shows the changes in the CPI between 1959 and 1978 and the corresponding average thresholds for a nonfarm family of four.

**Change in the farm-nonfarm relationship.** Under the old definition, the poverty thresholds for farm families were adjusted for the average value of food consumed by these families which they had grown themselves. Based on a 1961 study of household consumption which indicated that the value of food produced by farm families for home use amounted to about 30 percent of their total food budget, the poverty cutoffs for farm families were established at 70 percent of the nonfarm levels.

Up to the present time, no entirely satisfactory means of determining the income required for equivalent levels of

**Table A-1. Changes Between 1959 and 1978 in the Consumer Price Index and the Average Poverty Threshold for a Nonfarm Family of Four**

Year	Consumer Price Index (1963=100)	Average threshold for a nonfarm family of four persons
1978.....	212.9	\$6,662
1977.....	197.9	6,191
1976.....	185.9	5,815
1975.....	175.8	5,500
1974.....	161.1	5,038
1973.....	145.1	4,540
1972.....	136.6	4,275
1971.....	132.3	4,137
1970.....	126.8	3,968
1969.....	119.7	3,743
1968.....	113.6	3,553
1967.....	109.1	3,410
1966.....	106.0	3,317
1965.....	103.1	3,223
1964.....	101.3	3,169
1963.....	100.0	3,128
1962.....	98.8	3,089
1961.....	97.7	3,054
1960.....	96.7	3,022
1959.....	95.2	2,973

living for farm and nonfarm families has been provided by studies on this subject. Further research is needed to analyze the differences in the costs between farm and nonfarm families. Although it is not yet possible to quantify exactly all the factors contributing to cost of living differences between farm and nonfarm families, research already completed suggests that the differences are not as great as provided for by the 70 percent differential. After weighing the available evidence, the Review Committee agreed that narrowing the farm-nonfarm differential to 85 percent more nearly reflects the overall cost of living differences between farm and nonfarm families than the previously used differential.

**Alternate level.** Because the poverty definition currently in use by the Federal Government does not meet all the needs of the analysts of the data, a variation was introduced at the same time that modifications were made to the SSA poverty index. This alternate cutoff, set at 125 percent of the official government standard, is obtained by multiplying the income cutoffs at the low-income level by 1.25. Thus, the income cutoff for a nonfarm family of four at 125 percent of the poverty level is \$8,328. Tables 2, 44, and 45 present selected data for persons, families, and unrelated individuals below 125 percent of the poverty level. Also, the entire set of detailed tables shown in this report has been tabulated for those below 125 percent of the poverty level. Requests

for these unpublished data, giving a specific description of the figures desired, may be made in writing to the Chief, Population Division, Bureau of the Census, Washington, D. 20233.

**Weighted average thresholds at the poverty level.** The poverty cutoffs used by the Bureau of the Census to determine the poverty status of families and unrelated individuals consist of a set of 124 thresholds arranged in a four-dimensional matrix consisting of family size (from one person, i.e., unrelated individuals, to seven or more person families) cross-classified by presence and number of family members under 18 years old (from no children present to six or more children present), sex of head, and farm-nonfarm residence (table A-2). Unrelated individuals and two-person families are further differentiated by age of head (under 65 years and 65 years and over). The total family income of each family in the sample is tested against the appropriate dollar threshold to determine the poverty status of that family. If the family's total income is less than its corresponding cutoff, the family is classified as below the poverty level. The average thresholds shown in table A-3 were weighted by the presence and number of children. For example, for a given size of family, sex of head, and residence category, the weighted average threshold for that group is obtained by multiplying the threshold for each presence and number of children category within the given family size by the number of families in that category. These products are then aggregated across the entire range of presence and number of children categories and the total aggregate is divided by the total number of families in the group to yield the weighted average threshold at the poverty level for that size family.

Because family composition varies by farm-nonfarm residence, the weighted average thresholds at the poverty level for farm families, as shown in table A-3, will not be exactly 85 percent of the nonfarm levels. Moreover, since family composition does not remain constant from year to year, the weighted average thresholds for 1978 will not reflect, identically, the change in the CPI between 1978 and earlier years.

Since the basic thresholds used to determine the poverty status of families and unrelated individuals are applied to all families and unrelated individuals, the weighted poverty thresholds are derived using all families and unrelated individuals rather than just those families and unrelated individuals classified as below the poverty level. To obtain the weighted poverty thresholds for families and unrelated individuals below 125 percent of the poverty level, the weighted thresholds shown in table A-3 may be multiplied directly by 1.25.

**Income deficit.** Income deficit is the difference between the total income of families and unrelated individuals below the poverty level, and their respective income thresholds. Computing the income deficit, families reporting a net income loss are assigned zero dollars and for such cases the deficit is equal to the poverty threshold. This measure provides an estimate of the amount which would be required

**Table A-2. Income Thresholds at the Poverty Level in 1978, by Sex of Head, Size of Family, and Number of Related Children Under 18 Years Old, by Farm-Nonfarm Residence**

<sup>1</sup>For one person (i.e., unrelated individual), sex of the individual.

to raise the incomes of all low-income families and unrelated individuals to their respective low-income thresholds. The income deficit is thus a measure of the degree of impoverishment of a family or unrelated individual. However, caution must be exercised in comparing the average deficit of families of different racial groups. Since the poverty thresholds used in this report are based on family size and composition, apparent differences in the average income deficits of racial groups may, to some extent, be a function of the differences in these characteristics. It must also be remembered that the thresholds in this report vary according to the sex of the family head. Thus, differences in the average deficit between families with a male or female head may be in part attributable to both differences in thresholds and to differences in family size and composition.

**Median income deficit.** The median income deficit is the amount which divides the distribution into two equal groups, one having an income deficit above the median and the other having an income deficit below the median.

**Mean income deficit.** The mean income deficit is the amount obtained by dividing the total income deficit of a group below the poverty level by the number of families or unrelated individuals (as appropriate) in that group.

**Deficit per family member.** The deficit per family member is the average amount of money necessary to raise every man, woman, and child in a family out of poverty. The deficit per family member is derived by dividing the total family income deficit of a group by the number of family members in the same group.

**Household.** A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit,

when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

**Group quarters.** All persons who are not members of households are regarded as living in group quarters. Group quarters are living arrangements for groups containing five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates of institutions were excluded from the survey.

**Family.** The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together; all such persons are considered as members of the same family. Thus, if the son of the head of the household and the son's wife are in the household, they are treated as part of the head's family. On the other hand, a lodger and his wife not related to the head of the household or an unrelated servant and his wife are considered as additional families, and not a part of the household head's family.

**Subfamily.** A subfamily is a married couple with or without children, or one parent with one or more own single children under 18 years old, living in a household and related to, but not including, the head of the household or his wife. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's

parents. Members of a subfamily are also members of a primary family. The number of subfamilies, therefore, is not included in the number of families.

**Unrelated individuals.** The term "unrelated individuals," refers to persons 14 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household; (2) be part of a household including one or more other families or unrelated individuals; or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the head of the household or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

**Primary families and individuals.** The term "primary family" refers to the head of a household and all other persons in the household related to the head by blood, marriage, or adoption. If nobody in the household is related to the head, then the head constitutes a "primary individual." A household can contain one and only one primary family or primary individual. The number of "primary" families and individuals is identical with the number of households.

**Head of family.** One person in each family was designated as the head. The head of a family is usually the person regarded as the head by members of the family. Women are not classified as heads if their husbands are resident members of the family at the time of the survey. Married couples related to the head of a family are included in the head's family and are not classified as separate families.

**Size of family.** The term "size of family" refers to the number of persons who are living together and are related to each other by blood, marriage, or adoption.

**Own children and related children.** "Own" children, as used in this report, are sons and daughters, including stepchildren and adopted children, of a family or subfamily head. "Related" children in a family includes own children and all other children in the household who are related to the family head by blood, marriage, or adoption.

**Number of workers.** This number includes all persons in the family who worked at any time during the year.

**Age.** The age classification is based on the age of the person at his last birthday.

**Race.** The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black. "Other races" are sometimes shown in combination with the Black population.

**Persons of Spanish origin.** Persons of Spanish origin were determined on the basis of a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (or the origin of some

other household member) from a "flash card" listing ethnic origins. Persons of Spanish origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Spanish origin. It should be noted that persons of Spanish origin can be of any race.

**Years of school completed.** Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

**Labor force and employment status.** The definitions of labor force and employment status relate to the population 14 years old and over.

**Employed.** Employed persons include (1) all civilians who, during the specified week, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family, and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, painting or repairing own home, etc.) or volunteer work for religious, charitable, and similar organizations.

**Unemployed.** Unemployed persons are those civilians who, during the survey week, had no employment but were available for work and (1) had engaged in any specific jobseeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off; or (3) were waiting to report to a new wage or salary job within 30 days.

**Labor force.** Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

**Not in the labor force.** All civilians 14 years old and over who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work; seasonal workers for whom the survey week fell in an off season; and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours) are also classified as not in the labor force.

**Occupation, industry, and class of worker.** Persons are classified according to the civilian job held longest during the year. Persons who held two jobs or more were reported in the job at which they worked the greatest number of weeks.

The occupation and industry groupings included in this report were based on the classification system used in the 1970 census, as were the data included in Current Population Reports, Series P-60, starting with No. 81. A detailed comparison of the 1970 classification systems to those used during the 1960's may be found in the Bureau of the Census Technical Paper 26, *1970 Occupation and Industry Classification Systems in Terms of Their 1960 Occupation and Industry Elements*.

In addition to the change in occupational titles between the March 1972 and the March 1971 surveys which did not affect the comparability of the data, a supplemental question, "What were your most important activities or duties?" was added which provided additional information for classifying persons by occupation. In general, the major impact of this supplemental question was to reclassify some persons from the "managers" classification into other types of occupations (primarily into the major occupation group of "craft and kindred workers").

Class of worker refers to the subdivision of workers into three groups: Wage and salary workers, self-employed workers, and unpaid family workers. The first group refers to persons working for wages, salaries, commissions, tips, pay "in kind," or at piece rate for private employer or for any government unit. The second group refers to persons working in their own business, profession, or trade, for profit or fees. The third group refers to persons working without pay in a business operated by a member of the household to whom they are related by blood or marriage.

**Work experience.** A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

**Weeks worked in the income year.** Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

**Part-time or full-time jobs.** A person is classified as having worked at part-time jobs during the preceding calendar year, if he worked at civilian jobs which provided less than 31 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

**Year-round full-time worker.** A year-round full-time worker is one who worked primarily at full-time civilian jobs (35 hours or more per week) for 50 weeks or more during the preceding calendar year.

**Nonworker.** A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

**Main reason for working part year.** For persons who worked 1 to 49 weeks during the year, the main reason for working part year is based on the response to the question "What were you doing most of the remaining weeks?"

**Main reason for not working.** For persons who reported that they did not work at a civilian job for pay or profit or on a family-operated farm or business during the year, the main reason for not working is derived from the response to the question "What were you doing most of last year?"

**Rounding.** Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

**Symbols.** A dash "--" represents or rounds to zero. The symbol "B" means that the base for the derived figure is less than 75,000. Three dots "... mean not applicable, "NA" means not available, and the symbol "r" means revised.

**Base figures.** The base figures shown for 1971 to 1978 were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1970 census, whereas the base figures for the years 1961 to 1970 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census. A more detailed description of this change can be found in an article entitled "Revisions in Current Population Survey," *Employment and Earnings*, Vol. 18, No. 8, February 1972, published by the Bureau of Labor Statistics.

The major effects resulting from the introduction of population controls and estimation procedures based on the 1970 census were to raise the number of families from 51.2 million to 51.6 million in the March 1970 CPS and to lower the number of related children under 18 from 69.8 to 68.7 million. However, the number of poor families and the number of related children below the poverty level remained about the same—5 million and about 9.5 million, respectively.

## LIMITATIONS OF THE POVERTY CONCEPT

In analyzing data on the low-income population, the following limitations should be noted. The poverty concept has been developed in order to identify, in dollar terms, a minimum level of income adequacy for families of different types in keeping with American consumption patterns. Based on an analysis of the percent of income devoted to food expenditures, an estimate was developed of the minimum cost at which an American family, making average choices, can be provided with a diet meeting recommended nutritional goals. Consequently, it is an overall statistical yardstick which reflects the different consumption requirements of families of different size, taking into account family composition and farm-nonfarm residence. Insofar as individual circumstances or consumption patterns differ, the dollar value of the poverty threshold for a given family size may not represent the money income required by an individual family to maintain a level of economic well being equivalent to other families with similar incomes. For a discussion of the limitations of money income as a measure of economic status, see "Trends and Composition of the Low-Income Population," by Renee Miller and Arno Winard, *Proceedings of the Social Statistics Section, American Statistical Association*, 1974.

The original intent of the poverty definition was not for administrative use in any specific program; it was to be a statistical yardstick. In April 1973, the Interagency Committee on Income Distribution and Poverty was requested by the Statistical Policy Division of the Office of Management and Budget to conduct a thorough review of the statistics on income and poverty. Three subcommittees, one focusing on updating the poverty threshold, another on measuring cash income, and the third on measuring noncash income, met throughout the summer of 1973 and came up with a number of recommendations. One of the conclusions reached by the Subcommittee on Updating the Poverty Threshold was that the development of separate measures for eligibility in programs should receive high priority. For a summary of the research recommendations of the Interagency Committee see "Review of Poverty and Income Distribution Statistics" by Bette S. Mahoney, *Statistical Reporter*, Statistical Policy Division, Office of Management and Budget, January 1974.

A detailed review of the poverty definition was completed in 1976. The Education Amendments of 1974 required the Assistant Secretary of Education, Department of Health, Education, and Welfare, to supervise a "thorough study of the manner in which the relative measure of poverty for use in the financial assistance program authorized by Title I of the Elementary and Secondary Education Act of 1965 may be more accurately and currently developed." At the end of 1974 an interagency Poverty Studies Task Force was established under the leadership of HEW which undertook an intensive review of the present definition of poverty and of the implications of various alternative measurement schemes. The findings of this study have been summarized in the report entitled "The Measure of Poverty" which was transmitted to Congress in April of 1976.

The impact on the poverty data of several frequently proposed changes in the poverty definition is described in "Improving the Poverty Definition," by Carol Fendler and Mollie Orshansky, *Proceedings of the Social Statistics Section, American Statistical Association*, 1979. The paper discusses the rationale for and results of two types of changes: (1) simplifying the poverty matrix by eliminating the farm-nonfarm differential and certain other variables, and (2) updating the thresholds to take into account newer data on nutritional needs and U.S. consumption patterns.

## COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

**Bureau of Economic Analysis (BEA) personal income series.** The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Bureau of Economic Analysis (formerly the Office of Business Economics), Department of Commerce, nor with the distributions of families and unrelated individuals by family personal income brackets published by that Bureau between the years 1929 to 1963. The lack of correspondence stems from the following differences in definition and coverage:

1. *Income definition.* The personal income series include, among other items, the following types of nonmoney income which are not included in the census definition: Wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 4 percent of total personal income. The Census Bureau definition of income, on the other hand, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. *Source of data.* The personal income series is estimated largely on the basis of data derived from businesses and governmental sources. These sources include the industrial and population censuses, employers' wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households. As discussed in the section "Source and reliability of the estimates," income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 90 percent of the comparable

total money income aggregates and about 97 percent of the comparable money wage or salary aggregates derived from the personal income series prepared by BEA.

For a more detailed discussion of the differences between distributions using Census money income and BEA personal income, see "Size Distributions of Family Personal Income: Methodology and Estimates for 1964" by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

*3. Population coverage.* The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States (except for a few families living on post). In addition the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of these groups is included in the aggregate personal income series released by the BEA.

### COMPARABILITY OF ESTIMATES FROM MARCH 1979 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1979 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these factors are changes in: (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; and (5) change in sample size. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

#### Population Controls and Metropolitan Residence Definitions

The data for 1971 through 1978 are in some instances not entirely comparable to figures for earlier years because of revisions in the Current Population Survey. Starting in January 1972, 1970 census-based population controls, metropolitan residence definitions, and other materials were introduced into the sample and estimation procedures. The major item affecting comparability at the overall national level is the introduction of population controls based on the 1970 census. Figures for previous years are tied in with 1960 census-based population controls. In a number of instances, data from the March 1970 and 1971 CPS's were revised to take account of 1970 census-based population controls, thus providing some measure of the impact of the changes (see table 3, Current Population Reports, Series P-60, No. 91). Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and low-income or poverty rates. However, the changes may have more impact on the population levels in different subgroupings such as the total number of persons or families either overall, within some particular income interval, or below the low-income level. A detailed description

of these changes appears in the Bureau of Labor Statistics report, *Employment and Earnings*, Vol. 18, No. 8, February 1972.

The figures shown for metropolitan areas are based on standard metropolitan statistical areas (SMSA's) as defined on the basis of the 1970 census; those published prior to the March 1973 CPS referred to SMSA's defined on the basis of the 1960 census. There are significant differences in the population classified as metropolitan from each of these definitions. For the 1970 definition of SMSA's, see 1970 Census of Population, Vol. 1, *Characteristics of the Population*, Part A, "Number of Inhabitants."

The number of poor persons in 1969 residing in metropolitan areas based on the 1970 definitions and procedures is about 760,000 higher than that based on the 1960 definitions and procedures. This difference arises partly because of the addition of new SMSA's and the expansion of existing ones, resulting in an increase in the size of the total metropolitan population.

**Comparability of metropolitan and nonmetropolitan data from the March 1979 CPS with data for previous years.** Changes in CPS design and procedures over the last several years have made the annual series of sample population data for metropolitan and nonmetropolitan areas inconsistent. Analytic comparisons of year-to-year changes in these figures should be avoided. Trends in metropolitan and nonmetropolitan population growth over the 1970-79 and 1976-79 periods should not be appreciably affected by the procedural changes.

The major revisions to the CPS sample design and estimation methods have involved the expansion of the number of sample units from 55,000 housing units to 65,500 housing units. This incorporation of approximately 10,000 supplemental housing units into the March CPS sample in 1977 was accompanied by new procedures for inflating the sample results to reflect national estimates. It was determined subsequent to the introduction of the additional sample that the new inflating (weighting) procedures used for processing both the March 1977 and March 1978 CPS supplement data had resulted in an apparent overestimate of the nonmetropolitan population and corresponding underestimate of the metropolitan population for those years. For March 1979 CPS, another revision of the weighting process was introduced to correct the problem discovered in the earlier procedures. The result of this change was a large spurious increase in the metropolitan population and decrease in the nonmetropolitan population relative to March 1978 CPS levels.

The March 1979 CPS metropolitan/nonmetropolitan population estimates also reflect other operational changes including the introduction of a coverage improvement sample designed to provide greater accuracy in survey estimation. The net effect of all changes in procedure was to increase the metropolitan area estimates. Research and detailed analysis of the impact of each procedural change on the population estimates is underway and the results will be issued in a forthcoming technical report.

## Collection of Income and Work Experience Data

This report presents data for persons and family heads with varying amounts of work experience. In the surveys from March 1966 to March 1969, civilian work experience data collected in the February and April surveys were matched with income data collected in the March survey for all households. In the surveys prior to March 1966 only persons included in the February and March surveys were matched.

Nonmatched persons included in the February and March interviews or the March and April interviews were almost always assigned work experience information from actual respondents with similar economic and demographic characteristics. Work experience values were estimated only when there was a nonmatched person with a given classification, but no respondent with similar economic and demographic characteristics.

No April or February 1969 survey record could be found for about 6 percent of the people included in the March 1969 survey. The major reasons for these nonmatches were migration, noninterviews, and coding errors. Beginning with the March 1970 survey, in order to eliminate the nonmatches and to improve the consistency between income and work experience data, both the income and work experience data were collected together in the March survey.

The remaining persons whose work experience data were assigned, resulted from inconsistencies between their work experience and income data and from persons who did not answer the work experience questions.

## Noninterviews, Nonresponses, and Allocations

In the March 1979 CPS, no interview was obtained for approximately 5 percent of the 56,000 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of head and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. Even though an interview is obtained in many cases, complete information for all of the income questions is not available, unknown or referred. In March 1979 the income data were incomplete for about 23 percent of the persons 14 years old and over. About 30 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Although nonresponse rates for families by poverty status are not available, it is known that families in the lower income intervals tend to have lower nonresponse rates than those in the middle and upper income intervals. This is due in part to the fact that lower income families have less com-

plicated financial arrangements than those in other income groups. For a more detailed discussion of this topic see paper by Mitsuo Ono and Herman P. Miller, "Income Nonresponses in the Current Population Survey" published in *Proceedings of the Social Statistics Section*, American Statistical Association, 1969.

For more detailed information on the characteristics of nonrespondents, see "Characteristics of Income Nonrespondents in the Current Population Survey," by Emmett Spiers, John Coder, and Mitsuo Ono, *American Statistical Association Proceedings of the Social Statistics Section*, 1971.

The history of imputing missing responses to the income questions on the March CPS began in 1962. Prior to this time, income tabulations were based solely on persons for which complete income information was obtained. In the survey years from 1962 to 1965, all of the income items were imputed for persons who did not answer one or more of the income items, even though some items may have been answered.

Beginning with the March 1966 survey, in the event a respondent did not answer one or more of the income questions, the missing income data for this person were imputed for only those income items which were not answered. Each of the earnings items was handled individually, whereas income items other than earnings were handled as a group. Characteristics used in this imputation were age, family status, race, residence, weeks worked, and major occupation group. The income amount assigned to a nonrespondent was that observed for another person with similar demographic and economic characteristics who did respond and who was selected systematically in the order in which individual records were processed.

Starting with the 1967 CPS, the Bureau of the Census introduced improved income edit and allocation procedures. The main feature of these procedures was a more refined method for imputing missing income data which expanded the use of information already known about that person. Among the major improvements made affecting the income data were the following: (1) An expanded set of social and economic characteristics within which the imputations were made; in addition to age, race, occupation, and weeks worked, the procedures included sex and type of family member as major variables within which the missing income items are imputed; (2) the elimination of inconsistent reporting which resulted in having workers with no earnings and earners with no weeks worked; and (3) the imputation procedure assigned missing earnings entries first and then utilized the earnings information to assign missing sources of income other than earnings. A more detailed description of the computer editing and allocation procedures may be found in a paper, "Computer Method to Process Missing Income and Work Experience Information in the Current Population Survey," by Emmett F. Spiers and Joseph J. Knott, published in the American Statistical Association, *Proceedings of the Social Statistics Section*, 1969. See also "Current Developments on Collecting Income Data in the Current Population Survey," by Mitsuo Ono, published in the American Statistical Association, *Proceedings of the Social Statistics Section*, 1971.

However, because of coding errors in the processing of the 1968 CPS data, in that year alone it was not possible to apply all the aforementioned improvements to the editing and allocation procedures. Since these errors produced an underestimate of income, they had the effect of overstating the number of poor.

In addition, it was discovered that the computer procedures for editing certain incorrect income codes caused an upward bias in the income data for some respondents and therefore would tend to produce an underestimate of the number of poor. It is estimated that the net impact of these errors had the effect of overestimating the number of poor families by about 120,000. Due to these errors affecting the income data for 1967, data for that year are not strictly comparable with those shown for 1966 and 1968 to 1974.

**Comparison of 1966 poverty data according to original and revised editing and allocation procedures.** In order to evaluate the impact of the new procedures, the poverty data from March 1967 CPS were rerun, thus providing a bridge for the 1966 income year showing the results of both the earlier and the new procedures. Both series of data are shown in table 1 of Current Population Reports, Series P-60, No. 98. The general impact of the new allocation procedure was to shift the income distribution slightly upward, thus decreasing by 416,000 the number of poor families. A more detailed description of the new computer editing and allocation procedures may be found in Current Population Reports, Series P-60, No. 59, "Income in 1967 of Families in the United States," pages 17 to 19.

In processing the data collected in the March 1976 Current Population Survey, the Bureau of the Census utilized a new computer processing system designed to take maximum advantage of the Bureau's expanded computer capabilities. The revised system incorporated many improvements in the income edit and allocation procedures. The main feature of these procedures was a more refined method for imputing missing responses to the income and work experience questions on the March CPS questionnaire.

There were two main objectives in the revisions of the imputation procedures for income, work experience, and longest job. The first objective was to expand the detail and number of demographic and economic characteristics used in making imputations. Since nonrespondents are assigned information from respondents with "similar" characteristics, the degree of bias due to nonresponse may be reduced by incorporating more detailed information in the imputation procedures. The second objective was to maintain—wherever possible—observed relationships for respondents among income, work experience, and longest job variables in imputing missing information for nonrespondents. A detailed discussion of these improvements and the subsequent revisions to the 1974 income data (for comparability with 1975 data) can be found in Current Population Reports, Series P-60, No. 106. In addition to the major revisions that occurred in March 1967 and March 1976, procedures have been modified from time to time in order to refine the allocation models.

## Questionnaire Wording and Procedures

**Modifications in collecting income data in the March-April 1969 CPS.** Several modifications were introduced in the collection of income data in the March and April CPS supplements. These include (1) extension of the interview period of the six rotation groups for which income questions were asked in March and the use of follow-up forms in these six groups to accommodate household respondents who needed more time to obtain the required income information (it is estimated that some members of approximately 4,400 households, or 9 percent of the total relevant households, made use of these follow-up forms); (2) modification of the design and content of the questionnaire to allow for more detailed questioning of certain income items; thus, boxes for gross receipts, business expense, and net income have been added to the self-employment income questions to help the interviewer and respondent determine net income, and "yes-no" circles were added to the questions on income other than earnings in order to ascertain whether the respondent received or did not receive income; (3) field office editing procedures were extended to a 100 percent income edit of the CPS schedules; (4) training instructions were strengthened by including more detailed explanations and more examples; and (5) the interview group training session was shifted from February to March.

**Modifications in collecting income data in the March 1970 Current Population Survey.** The Bureau introduced modifications in the collection of income data for the March 1970 CPS supplement. These were: (1) An advance letter informing households about the collection of income data was mailed to all households except those in the first and fifth months. The latter households received special letters which explained the need for collecting both CPS and census data; (2) information on work experience and income was collected simultaneously for the full sample (in previous years, work experience information was collected separately from income data); (3) the interview period was extended one week for three-fourths of the sample (using follow-up calls and separate questionnaires). In addition, modified procedures which were incorporated in the March 1969 CPS supplement were also implemented in the March 1970 CPS. Overall, data indicate that the use of these procedures has resulted in some improvement in the collection of income data. The family income nonresponse rate has not only dropped by 5 percentage points (from 19 to 14 percent) but also it appears that the proportion of aggregate income amounts collected increased slightly in the March 1970 CPS supplement as compared with the proportion collected in the March 1969 CPS supplement.

**Modifications in collecting income data in the March 1971 Current Population Survey.** The Bureau continued to use the improved procedures which were incorporated in the March 1970 CPS. Procedural changes that were instituted in the March 1971 CPS, among others, were:

1. The interview period was extended one week for all households in the sample (using follow-up calls and separate

questionnaires). In the previous year's survey, the interview period was extended for only three-fourths of the sample.

2. Income from net royalties was included in the question covering estates, trusts, or dividends, interest on savings accounts or bonds, and net rental income. In previous surveys, income from net royalties was included in the question covering private pensions, annuities, alimony, regular contributions from persons not living in this household, and anything else.

3. An additional regional office follow-up was made by telephone to obtain income amounts for all follow-up cases containing one or more persons who were not interviewed during the original follow-up period, except for refusal.

**Modifications in collecting income data in the March 1975 Current Population Survey.** Several modifications in the design and content of the questionnaire were introduced in the March 1975 CPS to allow for more detailed questioning of certain income items. These changes were:

1. In the March 1974 CPS, income from aid to families with dependent children, old age assistance, and aid to the blind or totally disabled were asked in one combined question on welfare payments. Beginning in January 1974, the programs for old age assistance and aid to the blind or totally disabled were replaced by the Supplemental Security program. Therefore, in the March 1975 CPS a separate question was asked for the receipt of Supplemental Security income. Income from aid to families with dependent children or any other assistance was asked under the general category of public assistance or welfare payments.

2. In the March 1974 CPS, income from interest, net rental income or income from estates, trusts, or dividends was asked in one question. In the 1975 CPS these income types were asked as two questions with income received from interest on savings accounts or bonds included in one question and income from estates, trusts, or dividends in the other.

3. In the March 1974 CPS, income received from private pensions was asked along with alimony and certain other income items while income from government employee pensions was asked along with veterans' payments, unemployment compensation and workmen's compensation. In the March 1975 CPS, income received from both private and government employee pensions (including military retirement) were extracted from their previous categories and asked as one combined question.

**Modifications in collecting income data in the March 1977 Current Population Survey.** In the March 1977 CPS there were two modifications in the wording of the questionnaire. These two changes were:

1. In the March 1976 CPS, the respondent was asked if he or she received any income from "interest on saving accounts, bonds, etc." In the March 1977 CPS, the wording

was changed to "interest on savings or bonds, etc. Include even small amounts credited to . . .'s account."

2. In the March 1976 CPS, income from "anything else" was asked along with alimony or child support and other regular contributions from persons not living in the household. In the March 1977 CPS, the wording "anything else" was changed to "any other money income."

**Modifications in collecting income data in the March 1979 Current Population Survey.** As part of the March 1979 CPS, the Bureau conducted an experiment in an effort to improve the reporting of income data. An alternative questionnaire was used on 3 rotation groups and the traditional questionnaire was used on the remaining 5 rotation groups. The experimental questionnaire used more probing questions and inquired about more detailed sources of income. The results of the experiment and its subsequent impact on the estimates are discussed in the section, "The March 1979 CPS Income Experiment."

### Changes in Sample Size

Starting with the March 1977 CPS, the poverty data are based on an expanded sample of households. The expansion of the basic monthly CPS sample was from about 55,000 housing units to 65,500 units. A comparison of data from the March 1976 CPS before and after expansion of the sample indicated that the increased sample size had very little impact on the data for the poverty population. For example, the number of poor persons in 1975 based on the smaller CPS sample was 25.9 million, while the estimate obtained from the expanded sample was 25.8 million, a difference of only 0.3 percent. For further details, see Current Population Reports, Series P-60, No. 115, page 10.

### OTHER LIMITATIONS OF THE DATA

Although every effort is made to reduce the errors of underreporting, nonreporting or misreporting of income data in the Current Population Survey, they still occur because of various reasons. Some of these are (1) overlooking income received, especially small amounts of income types not regularly received, e.g., contributions from nonhousehold members, (2) reluctance to reveal certain types of income, e.g., public assistance, (3) rounding estimates, (4) misunderstanding the question, (5) lack of information, especially covering family members not present at the time of interview, (6) interviewers' errors, (7) processing errors, etc. For more details on this topic of income underreporting in censuses and surveys, see (1) *Income Distribution in the United States* (a 1960 Census Monograph), by Herman P. Miller, Bureau of the Census, 1966, (2) *The Structure of Income*, by Irving B. Kravis, University of Pennsylvania, 1962; and (3) "Size Distribution of Family Personal Income: Methodology and Estimates for 1964," by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

## Appendix B. Source and Reliability of the Estimates

### SOURCE OF DATA

The estimates in this report are based on data from the Current Population Survey, the 1960 Decennial Census 1-in-1,000 sample and the 1970 Decennial Census 1-in-100 sample from the Bureau of the Census.

**Current Population Survey (CPS).** Most of the CPS estimates in this report are based on data obtained in March 1979. Some estimates are based on data obtained in earlier years. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked every month about each member 14 years old and older in each sample household. In addition, supplementary questions are asked each March about money income for the previous year. In order to obtain more reliable data for the Spanish-origin population, the March 1979 CPS sample was enlarged to include all households from the November 1978 sample which contained at least one person of Spanish origin. This resulted in almost doubling the number of sample persons of Spanish origin. In addition, this report includes persons in the Armed Forces living off post or with their families on post.

The present CPS sample was initially selected from the 1970 census files and is updated continuously to reflect new construction where possible. (See section, "Nonsampling Variability.") The monthly CPS sample is spread over 614 areas with coverage in each of the 50 States and the District of Columbia. The CPS sample areas comprised 1,113 counties, independent cities, and divisions in the Nation.

In the expanded sample, approximately 56,000 occupied households were eligible for interview. Of this number, about 2,500 occupied units were visited but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason. In addition to the 56,000, there were also about 9,500 sample units which were visited but were found to be vacant or otherwise not eligible to be interviewed.

Previous sample designs used were based on files from the most recently completed census updated for new construction. The table below provides a description of some aspects of the CPS sample designs in use during the referenced data collection periods.

The estimation procedure used for the monthly CPS data involves the inflation of the weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, race, and sex. These independent estimates were based on statistics from decennial censuses, statistics on births, deaths, immigration, and emigration; and statistics on the strength of the Armed Forces. The estimation procedure for the data in the report also involved a further adjustment so that husband and wife of a household received the same weight.

**Decennial census of population.** The 1960 1-in-1,000 sample, and the 1970 1-in-100 sample are stratified systematic samples of the households enumerated in the 1960 and 1970 censuses.

### Description of the Current Population Survey for March Supplement

Beginning of time period	Number of sample areas <sup>1</sup>	Households eligible		Housing units visited not eligible <sup>2</sup>
		Interviewed	Not interviewed	
March 1978.....	614	54,000	2,500	10,000
March 1977.....	614	53,500	2,500	9,500
March 1973.....	461	45,000	2,000	8,000
March 1972.....	449	45,000	2,000	8,000
March 1967.....	449	48,000	2,000	8,500
March 1963.....	357	33,500	1,500	6,000
March 1960.....	333	33,500	1,500	6,000

<sup>1</sup>These areas were chosen to provide coverage in each State and the District of Columbia.

<sup>2</sup>These are housing units which were visited, but were found to be vacant or otherwise not eligible for interview.

Note: Prior to 1966 income data were collected from approximately 75 percent of occupied households in CPS.

## RELIABILITY OF THE ESTIMATES

Since the estimates in this report are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaire, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling. The standard errors provided for this report primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The full extent of nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

**Nonsampling variability.** As in any survey work, the results are subject to errors of response and nonreporting in addition to sampling variability. Nonsampling errors can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness to provide correct information on the part of respondents, inability to recall information, errors made in collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units within the sample (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall undercoverage, as compared to the level of the decennial census, is about 5 percent. It is known that CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races than for Whites.

Ratio estimation to independent age-sex-race population controls, as described previously, partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics than interviewed persons in the same age-sex-race group. Further, the independent population controls used have not been adjusted for undercoverage in the 1970 census, which was estimated at 2.5 percent of the population with similar undercoverage differentials by age, sex, and race as are observed in CPS.

A coverage improvement sample was included in computing the estimates for 1978 in order to provide coverage of mobile homes and new construction housing units which had no chance for selection under the 461 area CPS design. This sample is composed of approximately 450 sample household units which represent 237,000 occupied mobile homes and 600,000 new construction housing units. These new construction units are composed of those units where building permits were issued prior to January 1970 and construction was not completed by the time of the 1970 census (i.e., April 1970). The extent of other sources of

housing undercoverage is unknown but believed to be small. The inclusion of this coverage improvement sample in the CPS does not have a significant effect on the estimates.

In most cases the schedule entries for income are based on the memory or knowledge of one person, usually not the major earner. The memory factor in data derived from field surveys of income probably produces underestimates because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misrepresentation or to misunderstanding as to the scope of the income concept. Some of those errors are discussed in greater detail in the text of the report. See also the section entitled "Other Limitations of the Data."

**Comparability with other data.** In using metropolitan and nonmetropolitan data, particular care should be exercised in comparing estimates from 1976 and later years to each other and to those from earlier years. Methodological and sample design changes have occurred in these recent years resulting in relatively large differences in the metropolitan and nonmetropolitan area estimates.

**Sampling variability.** The standard errors given in tables B-1 through B-4 are primarily measures of sampling variability, that is, of the variation that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its estimated standard error enable one to construct confidence intervals, ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these was surveyed under essentially the same general conditions and using the same sample design, and an estimate and its estimated standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

All the statements of comparison appearing in the text are significant at a 1.6 standard error level or better, and most are significant at a level of more than 2.0 standard errors. This means that for most differences cited in the text, the estimated difference is greater than twice the standard

error of the difference. Statements of comparison qualified in some way (e.g., by use of the phrase, "some evidence") have a level of significance between 1.6 and 2.0 standard errors.

**Note when using small estimates.** Summary measures (such as means, medians, poverty rates, and percent distributions) are shown in the report only when the base is 75,000 or greater. Because of the larger standard errors involved, there is little chance that summary measures would reveal useful

information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each user's needs.

**Standard error tables and their use.** In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of

**Table B-1. Standard Errors of Estimated Numbers: 1966 Through 1978  
Total or White**

Note: See table B-5 for factors to be applied to the standard errors for other characteristics and table B-6 for factors for the years 1959 through 1965.

approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result, the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

**Data based on the CPS sample.** The figures presented in tables B-1 through B-4 are approximations to the standard errors of various CPS estimates shown in this report for the years 1966 through 1978. Tables B-1 and B-2 contain the standard errors of estimates of the number of total persons and persons 65 years old and over by poverty status. These tables also show the standard errors for the number of families and unrelated individuals by poverty status for "Total or White" and "Black and Other Races," respectively. The

last two columns of tables B-1 and B-2 pertaining to families should also be used for items which can typically appear only once in a given family, e.g., "number of heads of families."

Table B-3 and B-4 contain standard errors of estimated percentages of persons, families, and unrelated individuals below the poverty level for the United States.

Table B-5 presents the factors ( $f_1$ ) to be used for other characteristics and table B-6 presents the factors ( $f_2$ ) to be used for the years 1959 to 1965. These factors must be applied to the generalized standard errors in tables B-1 through B-4 in order to adjust for the combined effect of sample design and the estimating procedure on the value of the characteristic. For example, to produce approximate standard errors for families below the poverty level in 1959 with seven or more members, use the factor 1.1 for family size from table B-5 and the factor 1.4 for 1959 from table B-6. Thus from table B-1, the generalized standard error on

**Table B-3. Standard Errors of Estimated Percentages of Persons Below the Poverty Level: 1966 Through 1978**

Base of estimated percentage (thousands)	Estimated percentage				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75.....	4.6	7.1	9.8	14.1	16.3
100.....	3.9	6.1	8.5	12.2	14.1
250.....	2.5	3.9	5.3	7.7	8.9
500.....	1.8	2.7	3.8	5.5	6.3
1,000.....	1.2	1.9	2.7	3.9	4.5
2,500.....	0.8	1.2	1.7	2.4	2.8
5,000.....	0.6	0.9	1.2	1.7	2.0
10,000.....	0.4	0.6	0.8	1.2	1.4
25,000.....	0.2	0.4	0.5	0.8	0.9
50,000.....	0.2	0.3	0.4	0.5	0.6
100,000.....	0.12	0.2	0.3	0.4	0.4

Note: To estimate standard errors for persons at all income levels, divide these standard errors by 2.0. See table B-5 for factors to be applied to the standard errors for other characteristics and table B-6 for factors for the years 1959 through 1965.

**Table B-4. Standard Errors of Estimated Percentages for Families and Unrelated Individuals Below the Poverty Level: 1966 Through 1978**

Base of estimated percentage (thousands)	Estimated percentage				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75.....	2.2	3.4	4.7	6.8	7.9

10,000.....	0.2	0.3	0.4	0.6	0.7
25,000.....	0.1	0.2	0.3	0.4	0.4
50,000.....	0.09	0.1	0.2	0.3	0.3

Note See table B-5 for factors to be applied to the standard errors for other characteristics and table B-6 for the years 1959 through 1965.

1,257,000 families is 49,000; applying the two factors, 1.1 and 1.4, the standard error for families below the poverty level in 1959 with seven or more members is  $1.1 \times 1.4 \times 49,000 = 75,000$ .

Detailed standard errors of estimated numbers of persons and families below the poverty level are shown in tables 10, 16, 40, and 46 of this report.

To calculate standard errors for persons and families in poverty it was necessary to use two parameters (denoted as "a" and "b") which are presented in tables B-7 through B-9. These parameters were used to calculate the tabulated standard errors in tables B-1 through B-4 and to calculate the factors in table B-5. They also may be used to calculate standard errors and estimated percentages. Direct computation of the standard errors will give more accurate results than the use of the standard error tables. Methods for direct computation are given in the following sections.

**Data based on 1960 census 1-in-1,000 sample.** Standard errors for data based on the 1960 census 1-in-1,000 sample are estimated by applying the appropriate factors given in tables B-5 and B-6 to the standard errors shown in tables B-1 through B-4.

**Data based on the 1970 census 1-in-100 sample.** Sampling errors of all sample data from the 1970 Decennial Census in this report are small enough to be disregarded. However, these standard errors may be found in the appropriate volumes.

**Standard errors of estimated numbers.** The approximate standard error,  $\sigma_x$ , of an estimated number shown in this report can be obtained in two ways. It may be obtained by use of the formula

$$\sigma_x = f_1 f_2 \sigma \quad (1)$$

where  $f_1$  is the appropriate factor from table B-5,  $f_2$  is the appropriate factor from table B-6, and  $\sigma$  is the standard error for a characteristic obtained by interpolation from table B-1 or B-2. Alternatively, the standard errors may be approximated by the following formula, (2), from which the standard errors were calculated in table B-1 and B-2. Use of this formula will provide more accurate results than the use of formula (1) above.

$$\sigma_x = f_2 \sqrt{ax^2 + bx} \quad (2)$$

Here  $x$  is the size of the estimate and  $a$  and  $b$  are the parameters in tables B-7 to B-9 associated with the particular type of characteristic.

**Standard errors of estimated percentages.** The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator

of the percentage are in different categories, use the factor or parameter indicated by the numerator. The approximate standard error,  $\sigma_{(x,p)}$ , of an estimated percentage can be obtained by use of the formula

$$\sigma_{(x,p)} = f_1 f_2 \sigma \quad (3)$$

In this formula  $f_1$  is the appropriate factor from table B-5,  $f_2$  the appropriate factor from table B-6, and  $\sigma$  is the standard error for a characteristic in table B-3 or B-4. Alternatively, the standard errors may be approximated by the following formula, (4). Direct computation will give more accurate results than use of the standard error tables and the factors.

$$\sigma_{(x,p)} = f_2 \sqrt{\frac{b}{x} \cdot p (100 - p)} \quad (4)$$

Here  $x$  is the size of the subclass of the persons or families and unrelated individuals which is the base of the percentage,  $p$  is the percentage ( $0 \leq p \leq 100$ ), and  $b$  is the parameter in tables B-7 to B-9 associated with the particular type of characteristic in the numerator of the percentage.

**Illustration of the use of standard error tables.** Table A of this report shows that in 1978 there were 24,497,000 persons below the poverty level. Table B-1 shows the standard error of an estimate of this size to be approximately 418,000. In this situation no factors have to be applied to the standard error, i.e., both  $f_1$  and  $f_2$  are equal to 1.0. Alternatively, using the parameters in table B-7 in formula (2) gives a standard error of

$$420,000 = \sqrt{(-0.000031)(24,497,000)^2 + (7946)(24,497,000)}$$

The 68-percent confidence interval as shown by the data is from 24,077,000 to 24,917,000. Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, we could conclude with 95-percent confidence that the average estimate derived from all possible samples lies within the interval from 23,657,000 to 25,337,000 (using twice the standard error).

Of the 24,497,000 persons below the poverty level, 7,625,000, or 31.1 percent, were Black. Table B-3 shows the standard error of 31.1 percent on a base of 24,497,000 to be approximately 0.8 percent.

Alternatively, this standard error could have been derived by using the "b" parameter for Blacks from table B-7 in formula (4).

$$0.8 = \sqrt{\frac{7,946}{24,497,000} (31.1) (68.9)}$$

Consequently, the 68-percent confidence interval as shown by these data is from 30.3 to 31.9 percent, and the 95 percent confidence interval is from 29.5 to 32.7 percent.

**Standard error of a difference.** The formula for approximate standard errors of the difference between two estimates is given by (5).

$$\sigma_{\Delta} = \sqrt{\frac{\sigma_1^2}{1} + \frac{\sigma_2^2}{2} - 2p \frac{\sigma_1 \sigma_2}{1 \cdot 2}} \quad (5)$$

**Table B-5. Factors to be Applied to Generalized Standard Errors in Tables B-1, B-2, B-3, and B-4, for Family Characteristics and for Persons and Families by Region**

Characteristic	Factor ( $f_1$ )		Characteristic	Factor ( $f_1$ ) All tables
	Tables B-1 and B-4	Table B-2		
Families by--			Persons and families by--	
Age of head.....	1.1	1.2	Region.....	1.0
Employment status of head.....	1.4	1.5	Farm.....	1.4
Work experience of head.....	1.4	1.5	Nonfarm.....	1.0
Number of related children.....	1.1	1.2	Metro-nonmetro.....	1.4
Size of family.....	1.1	1.2	Spanish origin.....	1.2
Number of workers.....	1.4	1.5		
Educational attainment of head...	1.2	1.4		

Note: Apply these factors to parameters of interest at the U.S. level. For characteristics not appearing in this table  $f_1$  is assumed to be equal to 1.

**Table B-6. Factors to be Applied to all Standard Errors for 1959 Through 1965**

Year	Source of data	Factor ( $f_2$ )
1959.....	1-in-1,000 sample of 1960 census.....	0.6
1959 to 1964.....	CPS.....	1.4
1965.....	CPS.....	1.2
All other years.....	CPS.....	1.0

The estimates can be of numbers, percents, ratios, etc.  $\sigma_1$  and  $\sigma_2$  are the standard errors presented in tables B-1 through B-4. The correlation coefficient  $\rho$  can be determined from table B-10 for year-to-year comparisons for poverty estimates and proportions; for other comparisons assume that  $\rho$  equals zero. Making this assumption will result in accurate estimates of standard errors for the difference between two estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overstate the true standard error.

**Illustration of the computation of the standard error of a difference in estimates.** Table A shows that the number of persons below the poverty level in 1978 was 24,497,000 and in 1977 the figure was 24,720,000. The apparent difference is 223,000. As shown above the standard error on the estimate of 24,497,000 persons below the poverty level is 420,000. The standard error on the 24,720,000 low-income persons computed from (2) is 421,000. From table B-10 we obtain the correlation coefficient,  $\rho = .45$ . The standard error associated with the estimated difference of 223,000 is:

$$441,000 = \sqrt{(420,000)^2 + (421,000)^2 - 2(.45)(420,000)(421,000)}$$

This means that the 68-percent confidence interval around the 223,000 difference is from -218,000 to 664,000, i.e.,  $223,000 \pm 441,000$ . A conclusion that the average estimate

of the difference derived from all possible samples lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Thus we cannot conclude with 68 percent confidence that the number of persons below the poverty level in 1978 is lower than the figure for 1977; i.e., the 68-percent confidence interval includes zero.

**Ratios.** There are two cases to consider when computing the approximate standard error of a ratio. In the case where the numerator of the ratio is income, formula (6) for the standard error of the arithmetic mean should be used. In cases where the ratio has persons in the numerator and families in the denominator, formula (7) with the appropriate  $\rho$  will give a preferable result to that of formula (6).

**Computation of the standard error of an arithmetic mean.** To get a rough estimate of the standard error of a mean, the following formula can be used:

$$\sigma_{\bar{x}} = \sqrt{\frac{b}{y} \left[ \sum_{i=1}^c p_i x_i^2 - \bar{x}^2 \right]} \quad (6)$$

In this formula,  $y$  is the size of the base,  $p_i$  is the proportion of total cases in the  $i$  class,  $x_i$  is the midpoint of the  $i$  class (or discrete value of the  $i$  class).<sup>1</sup>

<sup>1</sup> For income tables, use \$5,000 as the midpoint for "Loss" and \$8,500 as the midpoint for "\$8,000 or more". For the income deficit table use \$6,000 as the midpoint of the "\$5,000 or more" interval and \$2,250 as the midpoint of the "\$1,500 or more" interval.

The mean value,  $\bar{x}$ , is defined by  $\sum_{i=1}^c p_i x_i$ . The b parameter is the parameter from table B-7 to B-9 corresponding to the characteristic of interest.

**Standard error of a ratio.** Certain mean values, for persons in families, listed in the tables of this report were not calculated using the formula for  $\bar{x}$  given above. Rather, they were calculated as the ratio of two numbers. For example, the mean number of children per family with children is calculated as

$$\frac{x}{y} = \frac{\text{total number of children in families}}{\text{total number of families with children}}$$

Standard errors for these means may be approximated as shown below. There are two cases to consider. In either case, the denominator y represents a count of families of a certain class, and the numerator x represents a count of persons with the characteristic under consideration who are members of these families.

**Case 1:** There is at least one person having the characteristic in every family of the class; as for example, the mean number

of children per family with children. For ratios of this kind, the standard error is approximated by the following formula:

$$\sigma_{\frac{x}{y}} = \sqrt{\left(\frac{x}{y}\right)^2 \left[ \left(\frac{\sigma_y}{y}\right)^2 + \left(\frac{\sigma_x}{x}\right)^2 - 2\rho \left(\frac{\sigma_x}{x}\right)\left(\frac{\sigma_y}{y}\right) \right]} \quad (7)$$

The standard error of the estimated number of families,  $\sigma_y$ , and the standard error of the estimated number of persons with the characteristic,  $\sigma_x$ , may be obtained from table B-1 or B-2. Alternatively, formula (2) and tables B-7 and B-8 may be used. In formula (7),  $\rho$  represents the correlation coefficient between the numerator and the denominator of the estimate. In the above example, and for other ratios of this kind, use 0.7 as an estimate of  $\rho$ . This procedure can also be used to compute the standard error on the estimate of mean family size where

$$\frac{x}{y} = \frac{\text{total number of persons in families}}{\text{total number of families}}$$

and  $\rho$  is again estimated to be approximately 0.7.

**Table B-7. Parameters for Estimated Numbers and Percentages of Persons, by Poverty Status, Age, Sex, and Race and Spanish Origin: 1966 Through 1978**

<sup>1</sup>Use these parameters for work experience and employment status data for persons.

**Case 2:** The number of persons having the characteristic in a given family may be 0, 1, 2, 3, or more; for example, the mean number of children per family. For ratios of this kind the standard error is approximated by formula (7) but  $\rho$  is assumed to be zero. If  $\rho$  is actually positive, then this procedure will provide an overestimate of the standard error of the ratio.

**Standard error of a median.** The sampling variability of an estimated median depends upon the form of the distribution as well as the size of its base. An approximate method of measuring the reliability of a median is to determine an interval about the estimated median, such that there is a stated degree of confidence that the median based on a complete census lies within the interval. The following procedure may be used to estimate the 68-percent confidence limits of a median based on sample data:

1. Determine, using the standard error tables or formula (4), the standard error of a 50-percent characteristic, using the appropriate base.
2. Add to and subtract from 50 percent the standard error determined in step (1).
3. Using the distribution of the characteristic, determine the 68-percent confidence interval of the characteristic by finding the values corresponding to the two points established in step (2).

A 95-percent confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step (1). The formula used to implement step (3) for linear interpolation is:

$$\text{Linear: } x_{pN} = \frac{N_1 - pN}{N_1 - N_2} (A_2 - A_1) + A_1 \quad (8)$$

where  $N$  = total number of families or persons in the distribution.

$x_{pN}$  = Estimated upper and lower bounds for the confidence interval ( $0 \leq p \leq 1$ ). For the purposes of calculating the confidence interval,  $p$  takes on the two values in step (2). Note that the median can be approximated by using  $p = .50$  in the formula.

$A_1$  and  $A_2$  = The estimates which are the lower and upper bounds, respectively, on the interval in which the median falls.

$N_1$  and  $N_2$  = The estimated number of families or persons greater than  $A_1$  and  $A_2$ , respectively.

**Illustration of the computation of a confidence interval for a median.** Using estimates from table 39 it can be shown that the median income deficit for poor female-headed families was \$2,166 in 1978. The size, or base, of the distribution from which this median was determined is 2,654,000.

1. Table B-4 shows that the standard error of an estimate of 50 percent on a base of 2,654,000 is about 1.3 percent.
2. To obtain a two standard error confidence interval on the estimated median, initially add to and subtract from 50 percent twice the standard error in step (1). This yields percentage limits of 47.4 and 52.6.

**Table B-8. Parameters for Estimated Numbers and Percentages of Families or Unrelated Individuals, by Poverty Status, and Race and Spanish Origin: 1966 Through 1978**

(For meaning of symbols, see text)

Characteristic	All races and White		Black and other races		Spanish origin	
	a	b	a	b	a	b
Total families or unrelated individuals.....	-0.000010	1721	-0.000089	1876	-0.000014	2420
Families or unrelated individuals below the poverty level.....	0.000076	1876	0.000076	1876	-0.000014	2420
Characteristics of families:						
Age of head.....	-0.000010	1389	-0.000087	1255	-0.000020	1422
Employment status of head.....	-0.000016	2078	-0.000133	2078	...	...
Work experience of head.....	-0.000016	2078	-0.000133	2078	-0.000012	1661
Number of related children under 18 years.....	-0.000010	1389	-0.000087	1255	-0.000020	1422
Size of family.....	-0.000010	1389	-0.000087	1255	-0.000020	1422
Number of workers.....	-0.000016	2078	-0.000133	2078	-0.000012	1661
Educational attainment of head...	-0.000011	1389	-0.000123	1255	-0.000020	1422

Note: The parameters for family characteristics can be used to estimate standard errors for families at all income levels. See table B-6 for factors to be applied to standard errors for the years 1959 through 1965.

3. From table 39, the income deficit of 1,423,000 (or 53.6 percent) of these families was greater than \$2,000 and the income deficit of 1,136,000 (or 42.8 percent) of these families was greater than \$2,500. Using formula (8), the lower limit on the estimate is found to be about

$$\frac{1,423,000 - (.526)(2,654,000)}{1,423,000 - 1,136,000} (\$2,500 - \$2,000) + \$2,000 = \$2,047$$

Similarly, the upper limit is found to be about

$$\frac{1,423,000 - (.474)(2,654,000)}{1,423,000 - 1,136,000} (\$2,500 - \$2,000) + \$2,000 = \$2,287$$

Thus, the 95-percent confidence interval on the estimated median is from \$2,047 to \$2,287.

**Table B-9. Parameters for Estimated Numbers and Percentages of Persons and Families Below the Poverty Level by Region and Farm-Nonfarm Residence: 1966 Through 1978**

Region	Persons		Families and unrelated individuals	
	a	b	a	b
North and West.....	-0.000032	8,184	0.000078	1,932
Northeast.....	-0.000032	8,184	0.000078	1,932
North Central.....	-0.000003	8,264	0.000079	1,951
West.....	-0.000029	7,390	0.000071	1,745
South.....	-0.000034	8,661	0.000083	2,045
Farm.....	0.000824	11,716	0.000143	2,031
Nonfarm.....	-0.000031	7,946	0.000076	1,876

Note: To estimate standard errors for persons at all income levels divide the parameters by 4 and use the appropriate formula given in the text. For families and unrelated individuals at all income levels, use the same parameters that are shown in the table for families and unrelated individuals below the poverty level. See table B-6 for factors to be applied to standard errors for the years 1959 through 1965.

**Table B-10. Year-to-Year Correlation Coefficients for Poverty Estimates**

(Numbers and proportions)

Characteristic	1977-78 <sup>1</sup>		1971-72		1970-71	
	Persons	Families	Persons	Families	Persons	Families
Total.....	0.45	0.35	0.15	0.14	0.31	0.28
White.....	0.35	0.30	0.14	0.13	0.28	0.25
Black.....	0.45	0.35	0.17	0.16	0.35	0.32
Other races.....	0.45	0.35	0.17	0.16	0.35	0.32
Spanish origin.....	0.65	0.55	0.17	0.16	0.35	0.32

<sup>1</sup>These correlation coefficients are also applicable to 1976-77, 1975-76, 1974-75, 1973-74, 1972-73, 1969-70 and earlier years.

## **Appendix C**

### **OEO TABULATION SPECIFICATIONS**

The data in tables 13, 14, 29, 33, and 36 of this report were extracted from a series of tabulations prepared for and previously distributed by the Office of Economic Opportunity (OEO). These tabulations contain more detailed cross-classifications by age and other characteristics than are shown in the tables presented in this report. Financial support for the preparation of the OEO tabulations was provided by the Office of the Assistant Secretary for Planning and Evaluation, Department of Health, Education, and Welfare. Requests for further information about these tabulations as well as limited requests for copies should be made in writing to Chief, Population Division, Bureau of the Census, Washington, D.C. 20233. Outlines of the contents of the complete OEO tabulations are shown on the following pages.

**OEO Table 1. AGE OF PERSON AND FAMILY RELATIONSHIP BY AGE AND SEX OF HEAD**

All Persons

Total.....	.....
Under 16 years.....	.....
Under 3 years.....	.....
3 to 5 years.....	.....
6 to 13 years.....	.....
14 and 15 years.....	.....

Same as "All Persons" for:  
Persons in Families With Male Head  
and Male Unrelated Individuals  
Persons in Families With Female Head  
and Female Unrelated Individuals

16 to 21 years.....	
Head.....	
Wife.....	
Other male.....	
16 and 17 years.....	
18 and 19 years.....	
20 and 21 years.....	
Other female.....	
16 and 17 years.....	
18 and 19 years.....	
20 and 21 years.....	

All of the above for:  
Below Poverty Level  
Percent Below Poverty Level  
Between 100 and 125 Percent of the  
Poverty Level  
Between 125 and 150 Percent of the  
Poverty Level

22 to 44 years.....	
Head.....	
Wife.....	
Other male.....	
Other female.....	
Same as 22 to 44 years for:	
45 to 54 years.....	
55 to 59 years.....	
60 to 64 years.....	

### Tabulation areas:

### **Nonfarm Econ.**

**Urbanization areas:**  
Nonfarm  
Farm  
  
**Metropolitan Areas**  
    Inside Central Cities  
    Outside Central Cities  
**Nonmetropolitan Areas**

## 10 Federal Regions

**OEO Table 2. EDUCATIONAL ATTAINMENT OF PERSONS BY AGE AND FAMILY RELATIONSHIP**

Years of school completed and family relationship	Total	Age (years)									
		14 and 15	16 and 17	18 to 21	22 to 34	35 to 44	45 to 54	55 to 59	60 to 64	65 and over	
		14	16	18	22	35	45	55	60	65	

Beth Saxon

Total.....	
No years of school completed.....	
Elementary: 1 to 5 years.....	
6 to 7 years.....	
8 years.....	
High school: 1 to 3 years.....	
4 years.....	
College (1 year or more).....	

Same as "Total" block for:  
Family heads  
Wives  
Other family members  
Unrelated individuals

**Median years of school completed.....**

Same as "Both Sexes" for:  
Male  
Female

All of the above for:  
Below Poverty Level  
Percent Below Poverty Level  
Between 100 and 125 Percent of the Poverty Level

All of the above for:  
White  
Black

OEO Table 5. INDUSTRY OF LONGEST JOB OF PERSONS BY FAMILY RELATIONSHIP

Industry of longest job and family relationship	Total	Age (years)						
		14 and 15	16 to 21	22 to 34	35 to 44	45 to 54	55 to 64	65 and over

## Both Sexes

Worked last year, total.....	Same as "Total" block for:
Wage and salary workers, incl. gov't.....	Family heads
Agriculture.....	Wives
Mining and construction.....	Other family members
Manufacturing.....	Unrelated individuals
Durable.....	Same as "Both Sexes" for:
Nondurable.....	Male
Transportation, communications, and other public utilities.....	Female
Wholesale and retail trade.....	All of the above for:
Service industries.....	Same Poverty Level and Race repeats as OEO Table 2
Professional.....	
Personal.....	
Public administration.....	
All other industries.....	
Self-employed, farm.....	
Self-employed, other.....	
Unpaid family workers.....	

OEO Table 6. AGE OF PERSONS UNDER 22 YEARS OLD BY EDUCATIONAL ATTAINMENT OF HEAD

(Excludes family heads and spouses)

Age of person by educational attainment of head	Both sexes				Male	Female
	Total	In husband- wife families	In families with other male head	In families with fe- male head	Same as "Both sexes"	Same as "Both sexes"

## All Educational Levels of Head

Under 22 years old.....	Same as "All Educational Levels of Head" for:
Under 1 year.....	Head With 8 Years of School or Less
1 year.....	Head With 9 to 11 Years of School
2 years.....	Head With 12 Years of School
3 years.....	Head With 13 Years of School or More
4 years.....	All of the above for:
5 years.....	Same Poverty Level and Race repeats as OEO Table 2
6 years.....	
7 years.....	
8 years.....	
9 years.....	
10 years.....	
11 years.....	
12 years.....	
13 years.....	
14 years.....	
15 years.....	
16 years.....	
17 years.....	
18 years.....	
19 years.....	
20 years.....	
21 years.....	
Under 3 years.....	
3 to 7 years.....	
8 to 13 years.....	
14 and 15 years.....	
16 to 21 years.....	
5 to 17 years.....	

**OEO Table 7. MAJOR ACTIVITY IN SURVEY WEEK OF PERSONS 14 TO 21 YEARS OLD BY EDUCATIONAL ATTAINMENT**

(Excludes family heads and spouses)

Educational attainment and age	Total	Going to school				Other	In Armed Forces	
		Total	Employed		Unem-ploy-ed	Not in labor force		
			Total	Full time				

**Both Sexes**

Total.....	Same as "Total" block for:
No school year completed.....	Persons 14 and 15 years old
Elementary: 1 to 5 years.....	Persons 16 and 17 years old
6 to 7 years.....	Persons 18 and 19 years old
8 years.....	Persons 20 and 21 years old
High school: 1 to 3 years.....	Same as "Both Sexes" for:
4 years.....	Male
College (1 year or more).....	Female
Median years of school completed.....	All of the above for:
Percent not a high school graduate.....	Same Poverty Level and Race repeats as OEO Table 2

**OEO Table 8. PERSONS IN FAMILIES BY SELECTED CHARACTERISTICS OF HEAD**

Family members by selected characteristics of head	Total	Age of head (years)						
		14 to 21	22 to 34	35 to 44	45 to 54	55 to 59	60 to 64	65 and over
All Persons in Families								Same as "All Persons in Families" for:
Educational attainment of head								Persons in Families With Male Head
Same categories as OEO Table 2								Persons in Families With Female Head
Work experience of head								All of the above for:
Same categories as OEO Table 3								Same Poverty Level and Race repeats as OEO Table 2
Occupation of longest job of head								
Same categories as OEO Table 4								

**OEO Table 9. INCOME OF SPECIFIED TYPE AS A PERCENT OF TOTAL INCOME FOR FAMILIES AND UNRELATED INDIVIDUALS**

Type and amount of income	Total	Percent of total income				
		1 to 24	25 to 49	50 to 74	75 to 99	100
